

AN INTRALOX SOLUTION FOR COOLING LINES

Partnering with Intralox means working with a conveyance solution provider who constantly develops and improves upon its innovations. Our patented Series 900 Open Flush Grid belt is a time-tested cooling line solution that delivers an increased open area and longer wear life to ensure the best results for tire manufacturers.

- **Increased cooling efficiency**
 - An increased open area of 43% allows for even greater cooling efficiency without compromising belt strength
- **Longer belt life lowers costs of ownership**
 - Special abrasion-resistant nylon rod material extends belt life by at least 30% (compared to polypropylene and acetal)
 - Patented flush-edge design accommodates rod growth without compromising the belt's integrity
 - Rods are fully enclosed in the hinge area of the belt, thereby decreasing abrasion
- **Reduced scheduled and unscheduled maintenance**
 - Rod retention feature designed to accommodate headless rods which can be easily removed and reused
 - Unique link design allows for quick and easy repairs
- **Fewer parts required in inventory**
 - No need to stock large quantities of headed rods since extra rods can be easily cut from a single longer rod
- **Simple, low-cost retrofit**
 - When converting from another S900 belt
- **Cooling Line Analysis Program**
 - Intralox specialists determine the optimal setup for your cooling lines
