

# ELIMINATE DEAD PLATES AND REDUCE SPOILAGE WITH **S560 BELTING FOR CAN MANUFACTURING**

Intralox® Series 560 belting offers an exceptional tight transfer solution for mass can conveyance. Eliminating the need for dead plate transfers, S560 belting has been shown in field testing to reduce spoilage of 12-oz sleek cans by 70% compared to transfers with dead plates. S560 belting also prevents cans from becoming stranded on dead plates, reducing the risk of palletizing mixed labels and eliminating labor needed to clear the line of stranded cans at each label change.

## Benefits

- Reduce tipped cans and spoilage
- Eliminate stranded cans on dead plates
- Reduce risk of palletizing mixed labels
- Eliminate time consuming and difficult dead plate maintenance on hard-to-access conveyors

**“The S560 has made a tremendous impact on reducing downed cans and has been maintenance free since it was installed. We have no worries on tip overs even with sleek cans. Any line would benefit from S560.”**

Devin Riley, Maintenance Supervisor at Ardagh–Olive Branch, USA
