

# ENDURALOX RODS: SUPERIOR STRENGTH AND RELIABILITY

With over 15 years of success in food and beverage applications, we've expanded our range of Enduralox™ offerings to include rods. Enduralox rods are made with a proven technology that provides superior resistance to material degradation. When paired with Intralox S400 and S1900 modules in Enduralox, you get the ideal combination. The rods ensure more consistent overall belt performance while reducing maintenance needs and downtime.

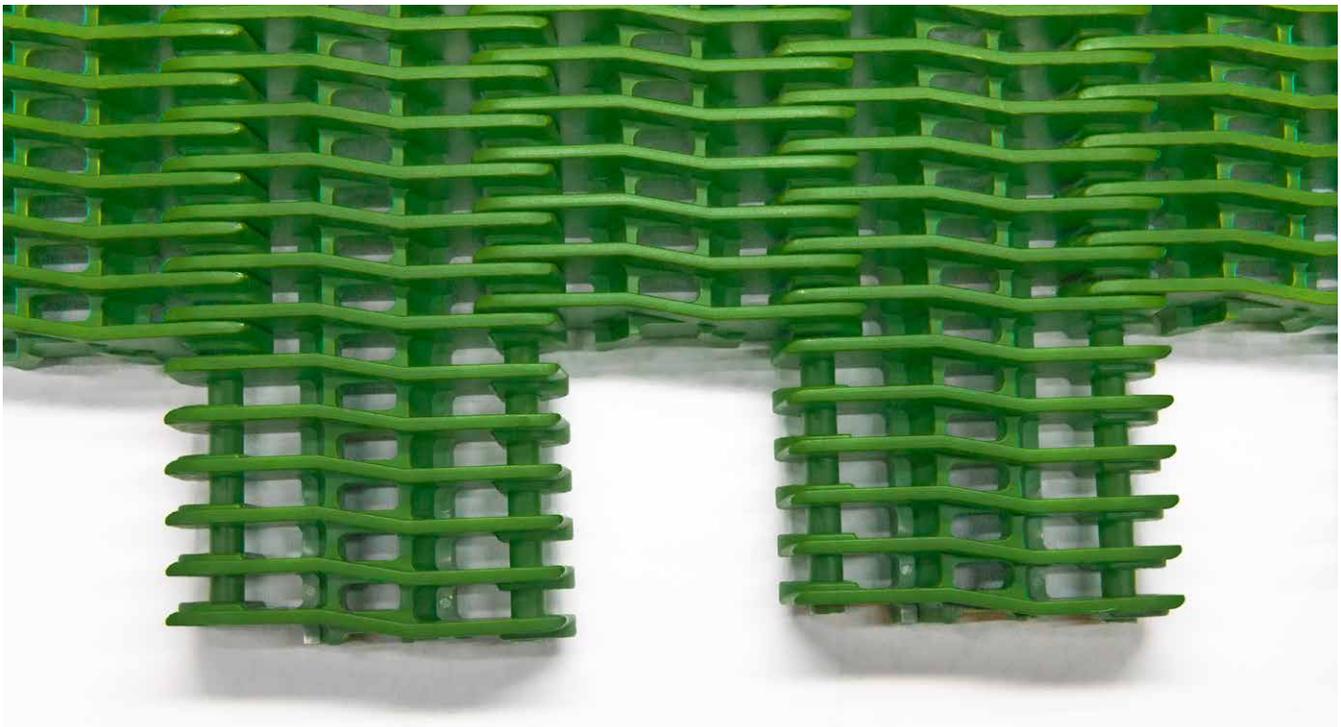

Enduralox rods can be seamlessly integrated into existing lines and are now standard for new S400 pasteurizer belts. This upgrade comes at no additional cost to you; Enduralox rods are the same price as natural polypropylene rods. Get more value and life from your pasteurizer lines with proven Enduralox technology.

**REDUCE**  
downtime and maintenance

**INCREASE**  
chemical resistance

**ENHANCE**  
overall belt performance

**ZERO COST DIFFERENCE**  
vs. natural polypropylene rods

**Ready to strengthen your line?**
