

DURABILITY AND IMPROVED BACKSIDE COVERAGE WITH S1700 FLUSH GRID NUB TOP

The Intralox® Series 1700 Flush Grid Nub Top™ belt is an innovative solution with an extensive track record for ensuring optimal dip tank performance. It delivers excellent backside coverage of anti-tack on the rubber slab and has a long service life in this highly abrasive application.

Nub Top pattern and 37% open area are combined to minimize air entrapment and reduce foaming

Abrasion-resistant components and durable belt design achieve longer average service life compared to other belting solutions

Only 8% contact area between rubber slab and belt maximizes anti-tack coverage

Product Benefits

- **Improved anti-tack coverage**
 - Diminishes need for rework
 - Eliminates the need for extra spray systems
 - Enables increased rubber stack heights, which allow for saved floor space and improved pallet transportation
- **Longer service life with fewer maintenance requirements**
- **Reduced cleaning needs as the belt design ensures less slurry carry-over and reduced foaming**
- **Improved cleaning due to less anti-tack trapped in the belt**
- **Lower total cost of ownership**

Design Features

- **Available in multiple materials including:**
 - Abrasion resistant (AR) nylon
 - Easy Release traceable polypropylene
 - Low Wear Plus
- **Abrasion resistant dual rod system**
- **Lug-tooth style, abrasion resistant sprockets are made of Ultra AR polyurethane and have a wide sprocket teeth design, lowering contact stress and reduced wear**
