

FIVE SIGNS YOUR FREEZER IS EXPERIENCING POOR AIRFLOW

If you check even one of these boxes, your operation could likely benefit from Intralox's Conditioning Optimization services.

Your product isn't frozen or cooled to the correct temperature when exiting the enclosure

Your fans, coils, and compressors have excessive frost buildup

Your product's temperatures are inconsistent after conditioning

You feel air flow at different levels of intensity when walking around your spiral or freezer

You can feel air leaks around the infeed and outfeed: cool air escaping the enclosure and/or warm air entering
