

STANDARDIZE BELT MAINTENANCE. REDUCE RISK.

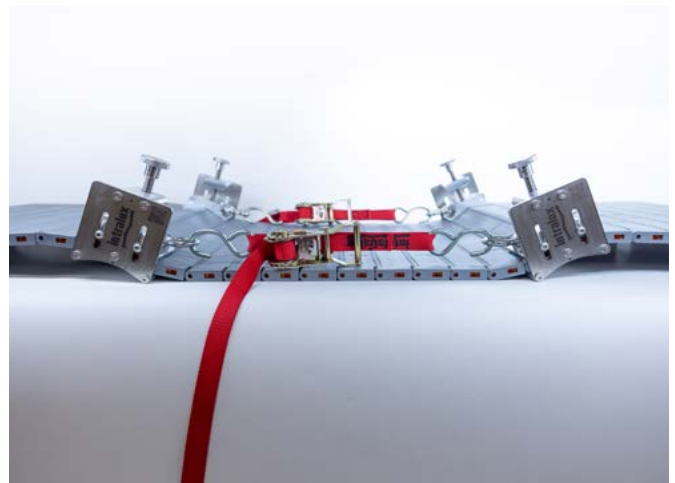

The Intralox® Clamp Tensioner Tool Set replaces pry bars, c-clamps, and other improvised belt-tensioning methods with a standardized, engineered method for tensioning long, heavy, closed-top modular plastic belts. Each tool's angled clamp design enables positive engagement tensioning, which requires less clamping force than friction-based alternatives, reducing belt damage risk and uncontrolled belt movement during installation and maintenance. The Intralox Clamp Tensioner Tool Set gives your team dedicated, reliable tools for every shift.

Use your Clamp Tensioner Tool Set for:

- Installation
- Repairs
- Replacements
- Belt shortening
- Handling wide, heavy, and inclined belts

Benefits

-  Works without relying on belt openings, making it ideal for closed-top belts
-  Improves operator safety by minimizing uncontrolled belt movement during installation and maintenance
-  Reduces belt damage risk from uneven loads and point stresses caused by improvised tensioning methods
-  Increases repeatability across operators and shifts with a standardized, engineered tensioning process
-  Replaces pry bars and other makeshift devices with a purpose-built tool designed for closed-top tensioning
-  Adds easy-to-use support for installation, repairs, replacements, and belt shortening
