

REPAIR YOUR METAL SPIRAL BELTS QUICKLY AND SIMPLY WITH **INTRALOX S22150 DIRECTDRIVE**

Intralox® Series 22150 DirectDrive™ metal belting is a revolutionary no-grind, no-cut, no-weld solution for freezing, cooling, and other product conditioning applications. The only metal belt made specifically for Intralox's DirectDrive System, S22150 DirectDrive's modular design significantly decreases downtime compared to traditional metal belts, removing the need for hot work permits and accelerating installation and repairs.

Features and Benefits

All DirectDrive System's revolutionary features in the only metal belting made specifically for it

Robust modular design enables no-grind, no-cut, no-weld repairs without hot work permits or completely defrosting the system

Runs directly on stainless steel drum, eliminating need for plastic cage bar caps to improve system hygiene

Symmetrical, high-quality steel belting can be flipped for even longer life
