

Simple Installation. Predictable Performance. Long-term Reliability.

ThermoConnect Heavy-Duty Edge

Intralox® ThermoConnect™ Heavy-Duty Edge (HDE) brings all the cleanability and hygienic design benefits of ThermoLace™ HDE—our original ZeroSplice™ connection style—to even more applications.

Its puzzle piece-style design snaps and holds in place before rod placement and after rod removal, enabling a single operator to safely and easily install or replace sections. Belting connected with this enhanced design does not tent, follows the expected path in the returnway, and facilitates reliable performance in center-drive and bi-directional conveyor configurations.

Benefits

- Simple, fast, intuitive installation and removal
- Improved rod design lowers risk of damage during belt removal
- Snap-and-hold connection style enhances safety while inserting or removing rods
- Enables reliable operation on center-driven conveyors and predictable belt behavior in the returnway
- Recessed edge mitigates potential damage from catchpoints
- Stronger connection for higher load applications

Powered by ZeroSplice Technology: Leave Splicing Behind

ZeroSplice technology—available exclusively from Intralox—introduces modularity to thermoplastic, positive-drive belting. It enables food processors to quickly connect sections of ThermoDrive® belting intuitively, safely, and reliably—without the training or equipment needed for field splicing.
