

**Team:** corteX

**Project:** AlzSage — Agentic AI for personalized healthcare and accelerated research in ADRD

**Stage:** Prototype Q/A review

## Project Summary

AlzSage is an agentic AI ecosystem that combines patient-centric AI agents with an ADRD AI Co-scientist to advance both personalized care and scientific discovery. Patient AI agents use digital twins and causal modeling to personalize risk management and early intervention, while the AI Co-scientist integrates multimodal data to uncover mechanisms and prioritize drug targets. Together, AlzSage delivers accessible and automated personalized care, accelerates ADRD research, and helps patients and researchers fully leverage AD Data Initiative resources.

## Team Members

Bingxin Zhao, Juan Shu, Zirui Fan,  
Xiaochen Yang, Buxin Su, Yujue Li,  
Yuxin Guo, Eddie Yang

## Organizations

## Presenters

**Bingxin Zhao**

Assistant Professor of  
Statistics and Data Science  
& Medicine, University of  
Pennsylvania

**Juan Shu**

Research Scientist,  
University of Pennsylvania
