

HOTRONIX® FUSION IQ™

Quick Start Guide: XRF

The Fusion controller has been updated! This guide will help acquaint you with the new features and show you how easy it is to connect your heat press to the cloud. Please read all accompanying safety instructions!

The Home Screen

The selected preset is shown here; tap and hold to see target values

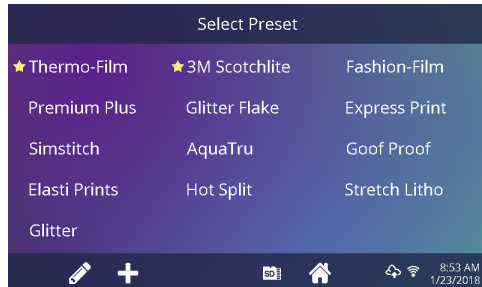

If a preset has multiple steps, your position is shown here; tap an empty circle to jump to that preset step

The status bar provides helpful information and shows you what's going on with your heat press

Current temperature and pressure values are displayed here; tap to set target values for temperature, pressure and time

Taskbar Buttons and Functions

Tap to select from a list of saved presets

Tap a preset to select it

Tap to enter edit mode

Tap to create a new preset

Managers can lock heat press controls so Users cannot change settings

Press is connected to WIFI

Press is connected to the cloud

Tap to configure your heat press

Managers (default password: "M") see all available setup options, while Users can access a limited set

Create and edit press Managers and Users to control access to settings; press statistics are recorded for cloud-synced users

Tap to toggle tack mode:

Tack mode OFF: press prints until time counts down to zero

Tack mode ON: press prints until print buttons are released

While setting target values, tap the status bar to quickly jump to a value

While setting target values, tap the status bar to quickly jump to a value

Place the heat press into standby mode to enable scheduled automatic heat-up (see Auto-On/Off in Setup)

Tap to cycle through shuttle modes

Shuttle automatically after each press, or by foot pedal

Shuttle by foot pedal only

Disable air-operated shuttle

Note: a preset with "auto shuttle" disabled will override this setting
