Dear Imaging Center:

This letter is in response to your inquiry concerning the safety of performing magnetic resonance (MR) procedures in patients who have been implanted with Edwards Lifesciences (formerly Baxter Healthcare Corporation, CardioVascular Group) heart valve therapy products:

MR Information:
MR procedures have been performed on numerous occasions on patients with Edwards' implantable products without reported problems. The products listed below are made from non-ferromagnetic, weakly ferromagnetic or paramagnetic materials. For all products, the *in vivo* forces are greater than those pertaining to the magnetic field interactions (i.e., the forces associated with translational attraction and torque are less than those associated with gravitational forces). Thus, these products are considered safe for patients undergoing magnetic resonance imaging (MRI) procedures using MR systems operating under the conditions described in the following pages.

Product Information:

Replacement Heart Valve Product Description (Stented Tissue)	**Models**	**Reference**
Carpentier-Edwards aortic and mitral porcine bioprostheses	2625, 6625	12, 21, 22
Carpentier-Edwards S.A.V. aortic and mitral bioprostheses	2650, 6650	12, 21, 22
Carpentier-Edwards Duraflex low pressure porcine bioprosthesis	6625LP	12, 21, 22
Carpentier-Edwards Duraflex low pressure porcine bioprosthesis with extended sewing ring	6625-ESR-LP	12, 21, 22
Carpentier-Edwards bioprosthetic valved conduit	4300	12, 21, 22

MR Conditional

Non-clinical testing has demonstrated that these devices are MR Conditional. A patient with these devices can be scanned safely immediately after placement of the implant under the following conditions:

- Static magnetic field of 3 tesla or less.
- Maximum spatial gradient field of 3000 gauss/cm or less.
- Maximum MR system-reported whole-body-averaged specific absorption rate (SAR) of 2W/kg for 15 minutes of continuous scanning per sequence in the normal operating mode.

Under the scan conditions defined above these devices are expected to produce a maximum temperature rise of 3 °C after 15 minutes of continuous scanning. In non-clinical testing, the image artifact caused by these devices extends approximately as far as 30 mm from the device when imaged with a gradient echo pulse sequence and approximately as far as 14 mm from the device when imaged with a spin echo pulse sequence and a 3 T MRI system. The lumen is partially to fully obscured under these conditions. MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of these devices. Optimization of MR imaging parameters is recommended.

The valve wireform stent is composed of a corrosion-resistant cobalt-chromium spring alloy that is commonly used in implantable devices. The nominal composition (wt. percent) is as follows:

Cobalt	Chromium	Nickel	Molybdenum	Manganese	Carbon	Beryllium	Iron
40%	20%	15%	7%	2%	< 0.10%	< 0.10%	Bal

MR Conditional

Non-clinical testing has demonstrated that these devices are MR Conditional. A patient with these valves can be scanned safely, immediately after placement of this valve under the following conditions:

- Static magnetic field of 3 tesla or less.
- Spatial gradient field of less than 3000 gauss/cm.
- Maximum MR system-reported whole-body-averaged specific absorption rate (SAR) of 2.0 W/kg for 15 minutes of continuous scanning sequence in the normal operating mode

Under the scan conditions defined above these devices are expected to produce a maximum temperature rise of 2.3 °C after 15 minutes of continuous scanning. In non-clinical testing, the image artifact caused by the device extends approximately as far as 27.5 mm from the bioprostheses when imaged with a gradient echo pulse sequence and approximately as far as 8.5 mm from the valves when imaged with a spin echo pulse sequence and a 3 T MRI system. The lumen is partially to fully obscured under these conditions.MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of these devices. Optimization of MR imaging parameters is recommended.

The valve wireform stent and orifice-stiffening band are composed of a corrosion-resistant cobalt-chromium spring alloy that is commonly used in implantable devices. The nominal composition (wt. percent) is as follows:

MR Conditional

Non-clinical testing has demonstrated that this device is MR Conditional. A patient with this valve can be scanned safely immediately after placement of this implant under the following conditions:

- Static magnetic field of 3 tesla or less
- Maximum spatial gradient field of 3000 gauss/cm or less
- Maximum MR system-reported whole-body-averaged specific absorption rate (SAR) of 2.0 W/kg for 15 minutes of continuous scanning per sequence in the normal operating mode

Under the scan conditions defined above this device is expected to produce a maximum temperature rise of 2.3 °C after 15 minutes of continuous scanning. In non-clinical testing, the image artifact caused by the device extends approximately as far as 25.5 mm from the bioprosthesis when imaged with a gradient echo pulse sequence and approximately as far as 12.5 mm from the valve when imaged with a spin echo pulse sequence in a 3 T MRI system. The lumen is partially to fully obscured under these conditions. MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of the bioprosthesis. Optimization of MR imaging parameters is recommended.

The valve wireform stent and orifice-stiffening band are composed of a corrosion-resistant cobalt-chromium spring alloy that is commonly used in implantable devices. The nominal composition (wt. percent) is as follows:

MR Conditional

Non-clinical testing has demonstrated that these devices are MR Conditional. A patient with these valves can be scanned safely, immediately after placement of these implants under the following conditions:

- Static magnetic field of 3 tesla or less
- Maximum spatial magnetic gradient field of 2670 gauss/cm or less
- Maximum MR system-reported whole-body-averaged specific absorption rate (SAR) of 2.0 W/kg for 15 minutes of MR scanning per sequence in the normal operating mode

Under the scan conditions defined above these devices are expected to produce a maximum temperature rise of 0.8 °C after 15 minutes of continuous scanning. In non-clinical testing, the image artifact caused by these devices extends approximately as far as 40 mm from the bioprostheses when imaged with a gradient echo pulse sequence and approximately as far as 40 mm from the valves when imaged with a spin echo pulse sequence in a 3 T MRI system. The lumen is partially to fully obscured under these conditions. MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of these bioprostheses. Optimization of MR imaging parameters is recommended.

The valve wireform stent and orifice-stiffening band are composed of a corrosion-resistant cobalt-chromium spring alloy that is commonly used in implantable devices. The nominal composition (wt. percent) is as follows:

MR Conditional

Non-clinical testing has demonstrated that this device is MR Conditional. A patient with this valve can be scanned safely, immediately after placement of this implant under the following conditions:

- Static magnetic field of 3 tesla or less.
- Spatial gradient field of less than 3000 gauss/cm.
- Maximum MR system-reported whole-body-averaged specific absorption rate (SAR) of 2.0 W/kg for 15 minutes of continuous scanning per sequence in the normal operating mode

Under the scan conditions defined above this device is expected to produce a maximum temperature rise of 2.5 °C after 15 minutes of continuous scanning. In non-clinical testing, the image artifact caused by the device extends approximately as far as 17 mm from the bioprosthesis when imaged with a gradient echo pulse sequence and approximately as far as 10 mm from the valve when imaged with a spin echo pulse sequence in a 3 T MRI system. The lumen is partially to fully obscured under these conditions. MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of the bioprosthesis. Optimization of MR imaging parameters is recommended.

The valve wireform stent and orifice-stiffening band are composed of a corrosion-resistant cobalt-chromium spring alloy that is commonly used in implantable devices. The nominal composition (wt. percent) is as follows:

Replacement Heart Valve Product Description (Stented Tissue)	Models	Reference
Cribier aortic bioprosthesis (Exclusively for Clinical Investigations/ Investigational Device/ To Be Used by Qualified Investigators only)	PHV1-23	N/A
Cribier-Edwards aortic bioprosthesis (Exclusively for Clinical Investigations/ Investigational Device/ To Be Used by Qualified Investigators only)	9000, 9000PHV, 9000MIS	N/A

Non-clinical testing has demonstrated that the Cribier-Edwards aortic bioprosthesis is MR Conditional. It can be scanned safely under the following conditions:

- Static magnetic field of 3 tesla or less.
- Spatial gradient field of 720 gauss/cm or less.
- Maximum whole-body-averaged specific absorption rate (SAR) of 3.0 W/kg for 15 minutes of scanning.

In non-clinical testing, the device produced a maximum temperature increase of 0.5 °C at a maximum whole body averaged specific absorption rate (SAR) of 3.0 W/kg for 15 minutes of MRI.

MR image quality may be compromised if the area of interest is in the exact same area or relatively close to the position of the device. Optimization of MR imaging parameters is recommended.

The valve's stent frame is composed of stainless steel material. The composition (wt. percent) of the stainless steel material meets the chemical composition requirements of ASTM F138-08 Standard for surgical implants which is as follows:

Chromium	Nickel	Molybdenum	Manganese	Silicon	Copper	Carbon	Phosphorus	Sulfur	Iron
17.00 to 19.00%	13.00 to 15.00%	2.25 to 3.00%	2.00% max	0.75% max	0.50% max	0.030% max	0.025% max	0.010% max	Bal

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
Edwards SAPIEN transcatheter heart valve	9000TFX	N/A

MR Conditional

Non-clinical testing has demonstrated that the Edwards SAPIEN THV (implant) is MR Conditional. It can be scanned safely under the following conditions:

- Static magnetic field of 1.5 tesla (T) or 3.0 tesla.
- Spatial gradient field of 2500 gauss/cm or less.
- Maximum whole-body-averaged specific absorption rate (WB-SAR) of 2 W/kg for 15 minutes of scanning.
- Normal mode operation, as defined in IEC 60601-2-33 Ed. 3.0, of the MR system.

In non-clinical testing and analysis, the device was determined to produce a temperature rise of less than 1.1 °C above background for a WB-SAR of 2 W/kg for 15 minutes of MR scanning in a 1.5 T and 3.0 T cylindrical bore whole body MR systems.

The image artifact extended as far as 15 mm from the device for spin echo images and 40 mm for gradient images when scanned in non-clinical testing in a 3T GE Signa-HDx MR system. The implant has not been evaluated in MR systems other than 1.5 or 3.0 T.

The valve's stent frame is composed of stainless steel material. The composition (wt. percent) of the stainless steel material meets the chemical composition requirements of ASTM F138-08 Standard for surgical implants which is as follows:

Chromium	Nickel	Molybdenum	Manganese	Silicon	Copper	Carbon	Phosphorus	Sulfur	Iron
17.00 to 19.00%	13.00 to 15.00%	2.25 to 3.00%	2.00% max	0.75% max	0.50% max	0.030% max	0.025% max	0.010% max	Bal

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
Edwards SAPIEN XT transcatheter heart valve (THV)	9300TFX	N/A

MR Conditional

Non-clinical testing has demonstrated that the SAPIEN XT THV (implant) is MR Conditional. It can be scanned safely, immediately after placement of this device under the following conditions:

- Static magnetic field of 1.5 tesla (T) or 3.0 tesla (T).
- Spatial gradient field of 2500 gauss/cm or less.
- Maximum whole body averaged specific absorption rate (WB-SAR) of 2.0 W/kg for 15 minutes of scanning.
- Normal mode operation, as defined in IEC 60601-2-33, Ed. 2.0, of the MR system.

In non-clinical testing and computer analysis using anatomically correct models of the human anatomy, the implant was determined to produce an estimated *in vivo* temperature rise of less than 2.3 °C for a WB-SAR of 2.0 W/kg for 15 minutes of MR scanning in a 1.5 T whole body coil from a GE Signa MR System . The estimated *in vivo* temperature rise was less than 2.6 °C for a WB-SAR of 2.0 W/kg in a 3.0 T GE Signa HDxt 3T (software version 14\LX\MR) whole body cylindrical bore MR system. These calculations may overestimate the true *in vivo* temperature rise, since the cooling effects of blood are not considered.

The image artifact extends as far as 14.5 mm from the implant for spin echo images and 30 mm for gradient echo images when scanned in non-clinical testing using a 3.0 T GE Signa HDx MR system (software version 14\LX\MR).

The implant has not been evaluated in MR systems other than 1.5 T or 3.0 T.

The frame of the implant is composed of MP35N alloy with the chemical constituents listed below:

Carbon	max. 0.025 wt.-%
Silicon	max. 0.15 wt.-%
Manganese	max. 0.15 wt.-%
Phosphorus	max. 0.015 wt.-%
Sulfur	max. 0.010 wt.-%
Chromium	19.0 – 21.0 wt.-%
Nickel	33.0 – 37.0 wt.-%
Iron	max. 1.0 wt.-%
Molybdenum	9 – 10.5 wt.-%
Titanium	max. 1.0 wt.-%
Boron	max. 0.015 wt.-%
Cobalt	Balance

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
Edwards SAPIEN 3 transcatheter heart valve (THV)	9600TFX	N/A
Edwards SAPIEN 3 Ultra transcatheter heart valve (THV)	9750TFX	N/A

MR Conditional

Non-clinical testing has demonstrated that the THV (implant) is MR Conditional. It can be scanned safely, immediately after placement of this device under the following conditions:

- Static magnetic field of 1.5 tesla (T) or 3.0 T.
- Spatial gradient field of 2500 Gauss/cm or less.
- Maximum whole body averaged specific absorption rate (WB-SAR) of 2.0 W/kg for 15 minutes of scanning.

Under the scan conditions defined above, the THV (implant) is expected to produce a maximum temperature rise of 3.0 °C after 15 minutes of continuous scanning.

In non-clinical testing, the image artifact caused by the device extends as far as 14.5 mm from the implant for spin echo images and 30 mm for gradient echo images when scanned in a 3.0 T MRI system. The artifact obscures the device lumen in gradient echo images.

The implant has not been evaluated in MR systems other than 1.5 T or 3.0 T.

For valve-in-valve implantation or in the presence of other implants, please refer to the MRI safety information for the surgical valve or other devices prior to MR imaging.

The frame of the implant is composed of MP35N alloy with the chemical constituents listed below:

Carbon	max. 0.025 wt.-%
Silicon	max. 0.15 wt.-%
Manganese	max. 0.15 wt.-%
Phosphorus	max. 0.015 wt.-%
Sulfur	max. 0.010 wt.-%
Chromium	19.0 – 21.0 wt.-%
Nickel	33.0 – 37.0 wt.-%
Iron	max. 1.0 wt.-%
Molybdenum	9 – 10.5 wt.-%
Titanium	max. 1.0 wt.-%
Boron	max. 0.015 wt.-%
Cobalt	balance

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
Edwards CENTERA transcatheter heart valve	9551S	24

MR Conditional

The Edwards CENTERA THV has been determined to be MR Conditional. A patient with this device can be immediately scanned safely in an MR system meeting the following conditions:

- Static magnetic fields of 1.5 tesla (T) or 3.0 T.
- Maximum spatial gradient field of 3000 Gauss/cm (30 T/m).
- Maximum MR System reported, whole-body-averaged specific absorption rate (WB-SAR) of 2.0 W/kg (Normal Operating Mode).

Based on worst-case non-clinical testing and calculated SAR in the patient during MRI, the CENTERA valve was determined to produce a temperature rise of less than 2.0 ºC at a maximum MR system reported whole-body-averaged specific absorption rate (SAR) of 2 W/kg for 15 minutes of MR scanning at 1.5 T, and a temperature rise of 2.0 ºC at a SAR of 2 W/kg for 15 minutes of MR scanning at 3.0 T.

Image artifact was measured non-clinically in a GE Signa 3T HDx MR system according to ASTM F2119-07 using the spin echo and gradient echo sequences specified therein. The spin echo images had artifacts that extended as far as 4 mm from the implant and partially to fully obscured the lumen. The gradient echo images had artifacts that extended as far as 5 mm from the valve.

The THV has not been evaluated in MR systems other than 1.5 T or 3.0 T. The delivery system has not been evaluated for MR compatibility and is considered MR unsafe.

The frame of the implant is composed of Nitinol alloy with the chemical constituents listed below in accordance with ASTM F2063-12:

Nickel	54.5% - 57.0%
Cobalt	Max. 0.05%
Iron	Max. 0.05%
Carbon	Max. 0.04%
Niobium	Max 0.025%
Copper	Max 0.01%
Chromium	Max 0.01%
Oxygen	Max 0.04%
Oxygen + Nitrogen	Max. 0.05%
Hydrogen	Max 0.005%
Titanium	Balance

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
CardiAQ-Edwards transcatheter mitral valve (TMV)	TMV3040B	N/A

MR Conditional

Non-clinical testing has demonstrated that the TMV is MR Conditional. A patient with this device can be scanned safely in an MR system meeting the following conditions:

- Static magnetic field of 1.5 tesla or 3.0 tesla only
- Maximum spatial gradient field of 4,000 gauss/cm (40 T/m) or less
- Maximum MR system reported, whole body averaged specific absorption rate (SAR) of 2 W/kg

Under the scan conditions defined above, the TMV is expected to produce a maximum temperature rise of 1.8 °C in a 1.5 tesla system and 2.4 °C in a 3.0 tesla system after 15 minutes of continuous scanning.

In non-clinical testing, the image artifact caused by the device extends approximately 10 mm from the TMV when imaged with a gradient echo and spin echo pulse sequence and a 3.0 tesla MRI system. MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of the TMV. Therefore, optimization of MR imaging parameters to compensate for the presence of this device may be necessary.

The frame of the implant is composed of Nitinol alloy with the chemical constituents listed below in accordance with ASTM F2063-12:

Nickel	54.5 to 57%
Titanium	Balance
Nitrogen plus Oxygen	<0.05%
Carbon	<0.05%

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
Edwards Alterra adaptive prestent in conjunction with Edwards SAPIEN 3 transcatheter heart valve	29AP4045, 9600TFX	N/A

MR Conditional

Non-clinical testing has demonstrated that the Edwards Alterra Adaptive Prestent, alone or with a deployed SAPIEN 3 transcatheter heart valve, is MR Conditional. A patient with this device can be scanned safely immediately after placement of this device in an MR system meeting the following conditions:

- Static magnetic fields of 1.5 tesla (T) or 3.0 T.
- Maximum spatial gradient field of 3000 Gauss/cm (30 T/m) or less.
- Maximum MR System reported, whole-body-averaged specific absorption rate (WB-SAR) of 2.0 W/kg (Normal Operating Mode).

Under the scan conditions defined above, the Edwards Alterra prestent is expected to produce a maximum temperature rise of 4.0 °C or less after 15 minutes of continuous scanning.

In non-clinical testing, the image artifact caused by the device extends as far as 6.6 mm for gradient echo images when scanned using a 3.0 T MRI system. The artifact obscures the device lumen in gradient echo images.

The implant has not been evaluated in MR systems other than 1.5 T or 3.0 T.

The frame of the valve implant is composed of MP35N alloy with the chemical constituents listed below:

Carbon	max. 0.025 wt.-%
Silicon	max. 0.15 wt.-%
Manganese	max. 0.15 wt.-%
Phosphorus	max. 0.015 wt.-%

Replacement Heart Valve Product Description (Stented Tissue)	Model	Reference
SAPIEN M3 dock in conjunction with the SAPIEN M3 valve	9770DDS/9780DDS/9680DSC with 9680TFX29M	N/A

MR Conditional

Non-clinical testing has demonstrated that the Edwards SAPIEN M3 Dock implant, with a deployed SAPIEN M3 valve, is MR Conditional. A patient can be scanned safely immediately after placement of these devices under the following conditions:

- Static magnetic field of 1.5 tesla (T) or 3.0 T only
- Spatial magnetic gradient field of 3,000 gauss/cm (30 T/m) or less
- Maximum MR system reported, whole body averaged specific absorption rate (WB-SAR) of 2.0 W/kg (Normal Operating Mode)

Under the scan conditions defined above, the Edwards SAPIEN M3 implant is expected to produce a maximum temperature rise of 2 °C or less after 15 minutes of continuous scanning.

In non-clinical testing, the image artifact caused by the device extends approximately 8 mm from the implant when imaged with spin echo pulse sequence and a 3.0 T MR system. The lumen of the valve inside the dock was partially to fully obscured in spin and echo gradient images.

Reduction in artifact may be possible with sequences designed for reduction of metal artifact.

CAUTION: Not available for commercial use. To be used only by qualified investigators, or physicians with valid approval for compassionate use or other expanded access.

Replacement Heart Valve Product Description	Model	Reference
Carpentier-Edwards BioPhysio valve (Exclusively for Clinical Investigations / Investigational Device / To Be Used by Qualified Investigators only)	3100TFX	N/A

The device has been shown not to have magnetic interactions at up to 3 tesla. It is also safe with respect to RF heating at 1.5 W/kg for up to 20 minutes. Artifacts have been determined at 1.5 tesla. Optimization of MR imaging parameters is recommended.

The frame of the valve is composed of nitinol, an alloy with high flexibility characteristics. The composition (wt. percent) ranges for the nitinol is are follows:

Nickel	Carbon	Oxygen	Iron	Titanium
55-57%	0.05% Max	0.05% Max	0.05% Max	42.85% Min

Replacement Heart Valve Product Description (Stentless Tissue)	Models
Edwards Prima aortic stentless bioprosthesis Edwards Prima Plus aortic stentless bioprosthesis	2500 2500P

These valves are made of porcine aortic valves and there are no metallic components. Therefore there are no MRI issues for these implants, and they may be considered as MR Safe.

Replacement Heart Valve Product Description (Bileaflet Mechanical)	Models	Reference
Edwards MIRA mechanical aortic and mitral valves	3600, 3600f, 3600u, 9600	1

Testing of these devices in a magnetic field of 1.5 tesla has shown that these devices are safe and compatible during MRI (magnetic resonance imaging) procedures. Valve housing is composed of ASTM B348 Grade 5 Ti-6Al-4V titanium alloy coated with turbostatic carbon. Leaflets are composed of graphite substrate coated with pyrolytic carbon. The composition for Ti-6Al-4V titanium alloy is as follows:

Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Aluminum	Vanadium	Titanium
≤ 0.03%	≤ 0.10%	≤ 0.0125%	≤ 0.40%	≤ 0.20%	5.5 to 6.75%	3.5 to 4.5%	Balance (~90%)

Replacement Heart Valve Product Description (Bileaflet Mechanical)	Models	Reference
Edwards-Duromedics bileaflet aortic and mitral prostheses	3160, 3160 R, 9120, 9120R	2
Edwards TEKNA bileaflet aortic and mitral valves	3200, 9200	2

Testing of these devices in a static magnetic field up to 1.5 tesla show that they are safe during MR procedures performed at 1.5 tesla or less. Valve housings are composed of solid pyrolytic carbon and the leaflets are graphite substrate coated with pyrolytic carbon. The retainer rings in the sewing ring are commercially pure titanium grade II. The stiffener rings are Stellite 25. The nominal composition (wt. percent) for Stellite 25 is as follows:

Cobalt	Chromium	Tungsten	Nickel	Iron	Manganese	Carbon
50%	20%	15%	10%	< 3%	1.5%	0.1%

The nominal composition (wt. percent) for commercially pure titanium grade II is as follows:

Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Titanium
< 0.03%	< 0.10%	< 0.012%	< 0.30%	< 0.25%	99%

Replacement Heart Valve Product Description (Ball and Cage Mechanical)	Models	Reference
Starr-Edwards aortic and mitral prostheses	1000, 1200, 2300, 2310, 2400, 6000, 6120, 6300, 6310, 6320, 6400	2, 3

Testing of these devices in a static magnetic field up to 1.5 tesla show that they are safe during MR procedures performed at 1.5 tesla or less though they are weakly ferromagnetic.

Starr-Edwards aortic and mitral prostheses	Pre-1000, Pre-6000, 1260, 2320, 6520 (plastic disk)	2, 4, 5

Testing of these devices in a static magnetic field up to 2.35 tesla show that they are safe during MR procedures performed at 2.35 tesla or less though they are weakly ferromagnetic.

Valve cages are comprised of Stellite 21. Additionally, the hollow balls of the metallic ball valves (Models 2300, 2310, 2320, 2400, 6300, 6310, 6320 and 6400) are also composed of Stellite 21.
The nominal composition (wt. percent) of Stellite 21 is as follows:

Cobalt	Carbon	Manganese	Silicon	Chromium	Nickel	Molybdenum	Iron
61.5%	<0.35%	< 1.0	1.0%	28.5%	<1.0%	6%	0.75%

Valve Repair Product Description					Models		Reference
Carpentier-Edwards Classic annuloplasty mitral and tricuspid rings					4400, 4500		1
Carpentier-Edwards Classic annuloplasty mitral and tricuspid rings with Duraflo treatment					4425, 4525		1
Edwards MC3 Tricuspid annuloplasty ring					4900		N/A
Testing of these devices in a magnetic field of 1.5 tesla has shown that these devices are safe and compatible during MRI (magnetic resonance imaging) procedures. Rings have titanium alloy cores. The nominal composition (wt. percent) of the titanium alloy is as follows:							
Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Aluminum	Vanadium	Titanium
< 0.05%	< 0.08%	< 0.012%	< 0.25%	< 0.13%	6%	4%	89%

Exceptions:
Carpentier-Edwards annuloplasty rings, Models 4400 and 4500, marketed from 1980 to 1983, were made of stainless steel. Therefore we are unable to advise on the safety of MR procedures for patients with these particular annuloplasty rings. These older rings were labeled with lot numbers (not serial numbers) that had the following format: 1C005 (i.e., where the first character was numeric, the second character was a letter from A to L and the last three or four characters were numeric).

Valve Repair Product Description					Models		Reference
Carpentier-McCarthy-Adams IMR ETlogix mitral annuloplasty ring					4100		15
GeoForm mitral annuloplasty ring					4200		16
The device has been shown not to have magnetic interactions at 3 tesla. It is also safe with respect to RF heating at 1.2 W/kg for up to 15 minutes. Artifacts have been determined at 1.5 tesla. Optimization of MR imaging parameters is recommended. Rings have titanium alloy cores. The nominal composition (wt. percent) of the titanium alloy is as follows:							
Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Aluminum	Vanadium	Titanium
< 0.05%	< 0.08%	< 0.012%	< 0.25%	< 0.13%	6%	4%	89%

Valve Repair Product Description				Models		Reference	
Carpentier-Edwards Physio mitral annuloplasty ring				4450		1, 13	
Carpentier-Edwards Physio mitral annuloplasty ring with Duraflo treatment				4475		1, 13	
Testing of these devices indicates that MR procedures may be conducted safely with static magnetic fields of 1.5 tesla and 3.0 tesla. Ring cores have corrosion-resistant cobalt-chromium spring alloy bands separated by polyester film strips. Core is covered by silicone rubber and a knit polyester covering. The nominal composition (wt. percent) of the cobalt-chromium alloy is as follows:							
Cobalt	Chromium	Nickel	Molybdenum	Manganese	Carbon	Beryllium	Iron
40%	20%	15%	7%	2%	< 0.10%	< 0.10%	Bal

Valve Repair Product Description	Model	Reference
Carpentier-Edwards Physio II mitral annuloplasty ring	5200	17

MR Conditional

Non-clinical testing has demonstrated that the Carpentier-Edwards Physio II annuloplasty ring, model 5200, is MR Conditional. A patient with this annuloplasty ring can be scanned safely immediately after placement of this implant under the following conditions:

• Static magnetic field of 3 tesla or less
• Spatial gradient field of 720 gauss/cm or less
• Maximum MR system reported whole-body-averaged specific absorption rate (SAR) of 3 W/kg for 15 minutes of scanning

In non-clinical testing, the Carpentier-Edwards Physio II annuloplasty ring produced a temperature rise of less than or equal to 1.8 °C at a maximum MR system reported whole-body-averaged specific absorption rate (SAR) of 3 W/kg for 15 minutes of MR scanning in a 3 tesla MR System.

MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of the device. Optimization of MR imaging parameters is recommended.

Rings have metal alloy bands separated by polyester film strips covered by silicone rubber and a woven polyester covering. The nominal composition (wt. percent) of the metal alloy is as follows:

Cobalt	Chromium	Nickel	Molybdenum	Manganese	Carbon	Beryllium	Iron
40%	20%	15%	7%	2%	<0.10%	<0.10%	Bal

Valve Repair Product Description	Model	Reference
Carpentier-Edwards Physio Tricuspid annuloplasty ring	6200	11

Testing of these devices in a magnetic field of 3.0 tesla has shown that these devices are safe and compatible during MRI (magnetic resonance imaging) procedures. Rings have titanium alloy cores. The nominal composition (wt. percent) of the titanium alloy is as follows:

Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Aluminum	Vanadium	Titanium
< 0.05%	< 0.08%	< 0.012%	< 0.25%	< 0.13%	6%	4%	89%

Valve Repair Product Description	Model	Reference
Edwards Myxo ETlogix mitral annuloplasty ring	5100	13

MR Conditional

Non-clinical testing has demonstrated that the Myxo ETlogix annuloplasty ring, model 5100, is MR Conditional. A patient with the Myxo ETlogix annuloplasty ring can be scanned safely immediately after placement of this implant under the following conditions:

• Static magnetic field of 3 tesla or less
• Spatial gradient field of 720 gauss/cm or less
• Maximum MR system reported whole-body-averaged specific absorption rate (SAR) of 3 W/kg for 15 minutes of scanning

In non-clinical testing, the Myxo ETlogix annuloplasty ring produced a temperature rise of less than or equal to 0.6 °C at a maximum MR system reported whole-body-averaged specific absorption rate (SAR) of 3 W/kg for 15 minutes of MR scanning in a 3 tesla MR System.

MR image quality may be compromised if the area of interest is in the same area or relatively close to the position of the device. Optimization of MR imaging parameters is recommended.

The ring has a titanium alloy core. The nominal composition (wt. percent) of the titanium alloy is as follows:

Nitrogen	Carbon	Hydrogen	Iron	Oxygen	Aluminum	Vanadium	Titanium
< 0.05%	< 0.08%	< 0.012%	< 0.25%	< 0.13%	6%	4%	89%

Valve Repair Product Description	Models
Cosgrove-Edwards mitral and tricuspid annuloplasty bands	4600
Cosgrove-Edwards mitral and tricuspid annuloplasty bands with Duraflo treatment	4625
These bands are composed of a silicone rubber strip impregnated with barium sulfate covered with a knit polyester cloth and there are no metallic components. Therefore, there are no MRI issues for these implants, and they may be considered as MR Safe.	

Pericardial Patches	Models
Equine Pericardial Patch	XAG
Bovine Pericardial Patch	4700
These patches are constructed from equine or bovine pericardial tissue and there are no metallic components. Therefore, there are no MRI issues for this implant, and they may be considered as MR Safe.	

Contact us in the USA at 800-424-3278 or outside the USA at 949-250-2500 if you have any questions.

Sincerely,
Technical Support
