Note:
For nonstick coatings, there are food-contact safety regulations that may limit the colorants that can be used for specific coatings. Additionally, the curing temperature for some interior coatings is much higher than that of exterior coatings. This further limits the range of colorants that can be used. Together, these factors will affect the final color that can be matched, which might deviate from the standard (especially for bright colors). The colors shown in this folder are only for reference and guidance. Please contact your PPG sales representative to request a particular color standard.

The technical data presented in this document is based upon information believed by PPG to be currently accurate. However, no guarantees of accuracy, comprehensiveness or performance are given or implied. Continuous improvements in coatings technology may cause future technical data to vary from what is presented in this document. Contact your PPG representative for the most up-to-date information.
