

# Combined Heat and Power

# Have power over your energy

What if you could generate your own energy, capture the generated heat and use it to offset your energy bills and carbon emissions?

Now you can with Combined Heat and Power (CHP) from Centrica Business Solutions, in partnership with Bord Gáis Energy.

## What is CHP?

CHP is a sustainable, efficient, cost-effective, low carbon and, above all, resilient source of energy. It converts a single fuel into power and heat simultaneously, right on your own site. It is ideal for businesses who want to reduce energy costs and carbon emissions – whether you're a small to medium enterprise or a large-scale industrial user.

## Is CHP right for you?

CHP has been successfully used in many sectors including:

- **Manufacturing and production facilities**
- **Leisure centres and hotels**
- **Supermarkets, warehouses and distribution centres**
- **Hospitals, universities and schools**
- **Commercial real estate**

If you can answer yes to any of the questions below, then CHP is worth considering.

1. **Do you use heat and power?**
2. **Is the cost of your energy rising?**
3. **Do you want to reduce your carbon emissions?**
4. **Are you looking for a stable on-site energy resource?**

## Why CHP from Centrica Business Solutions?

Through our partnership with Bord Gáis Energy, we are able to offer innovative energy management solutions to help Irish businesses deliver improvements in operational performance, create opportunities for growth and reduce energy spend. We work with you from the beginning, helping you benefit from maximum savings and efficiencies. We can monitor and maintain your unit throughout its life, to make sure you continue to receive the full benefit.
