Introduction

Instrumentation cable is used extensively by the petrochemical, pulp and paper and other process industries. It is designed to minimize noise and signal interference to deliver clean signals in harsh environments and general manufacturing operations.

Designed for use in wet or dry locations, instrumentation cable has a maximum conductor temperature of 90°C and a low temperature rating of -40°C. The cable jacket is resistant to sunlight, moisture and vapor penetration. It is also an economical alternative as the need for conduits and pull boxes is eliminated.

Applications

Instrumentation cable can be used in a broad range of applications, especially where the cable may be subjected to mechanical damage and corrosive chemicals.

Instrumentation cables can be used in raceways and direct burial applications and can be supported by messenger wire in aerial or outdoor applications.

Primarily used for control applications, instrumentation cable is recommended where optimal noise rejection is required. Instrumentation cable is available in individually shielded pairs or triads with an overall shield construction. The pairs or triads are isolated from each other and contain separate drain wires for grounding to provide maximum protection from crosstalk and common mode interference. It is also available in aluminum or steel interlocked armour (for mechanical protection), in 300V and 600V.

CAUTION NOTICE

In case of fire, well maintained early warning smoke detectors will give an alarm long before non-metallic coverings become combustible. However, the Electrical and Electronic Manufacturers Association of Canada has suggested that all purchasers of PVC insulated / jacketed products be advised of the following:

- Non-metallic coverings of electrical cables can burn and may transmit fire when ignited.
- Burning non-metallic coverings may emit acid gases which are toxic and may generate dense smoke.
- Emission of acid gases may corrode metal in the vicinity e.g. sensitive instruments and reinforcing rods in cement.

The installer and/or user assumes all liability for the consequences of the installation and/or use of any of the products in violation of any applicable law, regulation, or code.

CUSTOM TAGGING

We offer custom reel tags with project specific item identifiers and details, easing material management. Options include weather-proof, colour-coded stainless steel, printed RFID, or project specific templates.

SPECIALIZED PACKAGING

We can custom pack orders according to almost any specifications. Whether it's specified reel sizes, bug-free reels, or shrink wrapped pallets, we make sure it's packed right.

LOCAL AND INTERNATIONAL LOGISTICAL EXPERIENCE

Our team ensures your shipping standards, including custom packaging, are monitored, and met while keeping your project schedule in mind.

LAGGING

For long-distance transit, including export, bad weather, and rough terrain, we use wood covers or other suitable durable packaging to protect the reels.
