Overall Smaller Electronic Breaker Footprint

Designed for a secure and easier installation, the SNC breaker and loadcentre features an integrated neutral bus, providing a secure and reliable connection for your customer's indoor or outdoor application via utilizing an existing line side clip. A smaller electronic breaker footprint also gives customers over four inches of wire bending space for a simpler, cleaner, and faster project finish.

The new SNC MLO Loadcentre is compatible with existing Siemens breakers and surge solutions including the QSA breaker and FirstSurge™ stand-alone units.
