ENERGY AUDIT SOLUTIONS

GESCAN
A Sonepar Company

B.C. HYDRO APPROVED LIGHTING SOLUTIONS

Gescan stocks over 20,000 LED fixtures that are B.C. Hydro approved which means they're some of the most eco-friendly LED's you can find. In fact, businesses who make the switch to LED's often see an ROI in less than two years.

Save Money

Did you know that LED's last 10x longer and save 20-50% more energy than traditional lighting?

Save the Environment

Our LED's contain non-toxic materials and are 100 per cent recyclable, unlike other incandescent and HID bulbs.

Save Time

Access our extensive inventory across 26 locations in British Columbia, Alberta and Saskatchewan or through our comprehensive e-commerce website and mobile app.

Ready to make the switch?

Ask for an energy audit to find out how much you could be saving by switching to LED's.

Talk to an expert

Eco-lutions

ENERGY AUDIT SOLUTIONS

Our lighting experts have experience selecting the right LED fixtures for provincial grant programs and have been performing energy audits in commercial and industrial spaces for decades.

As a member of BC Hydro's Alliance of Energy Professionals, we'll work with you through the BC Hydro application process saving you time on searching for eligible fixtures and figuring out whether they are compatible with your existing controls.

Let us do the legwork

We help businesses in BC decide whether moving forward with a BC Hydro rebate is right for them. Our one-page ROI analysis saves time by helping businesses understand the upfront costs and payback periods when upgrading from a traditional lighting technology to an eligible LED fixture through a one-to-one incentive swap.

Receiving an ROI analysis takes less than an hour. It starts with a ten-minute phone conversation to determine eligibility, followed by a 45-minute on-site audit to check fixtures. After, you'll receive a detailed ROI analysis that includes your upfront expenditures, expected rebate value, monthly energy and maintenance savings, and more.

Your company may be eligible for incentives that cover up to HALF of project expenses. Combined with reduced consumption, cost and energy savings, and an increase in your bottom line, the decision to upgrade is easy. The majority of our clients experience a return on investment in less than two years. Total savings may even exceed the cost of your LED upgrade.

- **Hassle & risk-free BC Hydro application support**
- **CO2 footprint analysis included**
- **One-page ROI analysis**
- **No purchases necessary**
- **Get qualified in 45 mins**

ENERGY SAVING **LINEAR HIGHBAYS**

Built with quality to last and performance to get the job done, the budget-oriented Compact Pro High Bay by Lithonia Lighting® is up to 50% smaller than the typical high bay making it easier and quicker to install. But unlike most 'budget' high bays on the market, Compact Pro doesn't cut corners when it comes to quality, designed with key ratings and specs needed for real industrial spaces.

How our lighting experts can help your BC Business with LED upgrade

Switching to LED's is an ideal solution for businesses who are looking to lower their operating costs, when compared to traditional lighting. Businesses can further optimize their costs with advanced energy management features that reduce energy consumption and periods of use for each fixture, along with dimming, occupancy sensing, daylight harvesting and light scheduling capabilities.

Discover how much you could be saving.

As a member of BC Hydro's Alliance of Energy Professionals, Gescan works with businesses in BC to provide energy audits, helping them work through BC Hydro application process. On average, businesses that work with us save up to 50% of project costs and see an ROI in under two years.

With over 275,000 sq. feet of inventory, we stock smart lighting solutions that can be accessed through our comprehensive e-commerce site, or in-branch. Our lighting experts have experience selecting the right LED products for provincial grant programs and have been performing energy audits in commercial and industrial spaces for decades.

Eco-lutions

ENERGY AUDIT SOLUTIONS

According to The Climate Group (TCG), lighting can account for almost 5% of global CO2 emissions. TCG estimates that upgrading to LED lighting could offer a potential energy savings of 50%-70% as well as a carbon reduction of over 1,400M tons by 2025, if adopted globally. And while a decade or two ago, setting environmental goals was a means of managing a corporation's reputation, today it's about good business practices and improving the bottom line.

Bright Futures with LED

BC Hydro is funding your upfront costs to upgrade lights.

**Less energy consumption.
Less carbon emissions.
More savings.**

Better lighting is better for business.

Ask to speak to one of our lighting experts to find out if you qualify for BC Hydro's Incentive Program.
