PULL AHEAD

with Prefab Twisted Cable

FASTER WIRE PULLS *vs. Traditional Methods*

ServicePlex® is an assembly of single conductors twisted to create a uniform construction. This solution pulls like a single cable without the jamming that occurs with traditional parallel pulls. Featuring ServicePRO-X® Insulation—No Lubrication Required (#6 AWG and larger) and available with numbered, striped, or colored conductors for quick and easy phase identification.

THE BENEFITS

Cost Savings

Reduces scrap (no long/short legs) and pulls from a single reel, reducing storage, setup, and waste on the jobsite.

Ease of Installation

Unified diameter eliminates jamming and provides uniform pulling tension. Available with factory-installed pulling heads for even faster pulls.

Engineered Advantages

XLPE (thermoset) insulation performs substantially better than T90. It's Hospital Grade, rated for 600V or 1kV, and can withstand colder temperatures.

**FACTORY TWISTED
SINGLE CONDUCTORS**
(with optional ground)

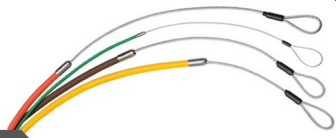

RW90

600 Volt
2-7 Conductors
#14 AWG – 750 Kcmil

RW90

1,000 Volt
2-7 Conductors
#14 AWG – 750 Kcmil

Distributed by

DEPENDABLE LEAD TIMES

Eliminate inventory and ship direct to the jobsite with quick leads and dependable, damage-free delivery from any of our nationwide manufacturing facilities.

INSTALLATION:

Available with **PRE-INSTALLED PULLING HEADS**

CONDUIT

Eliminates jamming in conduit for easier pulls into the raceway.

CABLE TRAY

Simple, orderly installation into cable tray, with fewer tie-downs required.

DIRECT BURIAL

ServicePlex® is available in direct burial rated RW90.

“The pull is unbelievable... ten times more efficient than paralleled wire, from setup through installation.”

CONSTRUCTION MANAGER
Fisk Electric

TESTIMONIALS

“We would have spent a better part of the day working our way through mud to set up four individual reels. ServicePlex® eliminated this problem and our pulls went great.”

PROJECT FOREMAN, *Guarantee Electric*

“We made our pull from one reel and needed only one man to feed it into the conduit. In tight spaces, you can only fit so many people.”

PROJECT FOREMAN, *Summit Electric*
