1. Base model functionality listed is the primary function of that instrument. For example, on the N991xB,C/5xB combo analyzers, cable and antenna analyzer is the standard function included with every N991xB,C/5xB.
2. Cable and antenna analyzer is not available on the N993xB,C/6xB. A subset of measurements, return loss and VSWR, is available as Option 320.
3. Option 320 is not applicable to N991xB,C/5xB. The N991xB,C/5xB includes reflection measurements of return loss and VSWR as standard functions.
4. On the N991xB,C/5xB analyzers, order Options 233 and 210 to obtain a tracking generator with the spectrum analyzer. There is no Option 220 on the N991xB,C/5xB analyzers. Option 233 provides the spectrum analyzer capability and Option 210 the "tracking" capability.
5. 10 MHz standard.
6. Models N9913/33B,C, N9914/34B,C and N9915/35B,C do not support frequency extenders. This is because the mixers' starting LO frequency is higher than 10 GHz and the FieldFox Port 1 provides the LO to the mixer. For a list of supported VDI frequency extenders, see Accessories pages 19-20.

1. Some of FieldFox options may not apply to the N9912C. Refer to the table on page 4 for more details. Additionally, to enable the *independent Source* function in the Spectrum Analyzer (SA) mode on the N9912C with options SA4, SA6, or SAX, option 220 (Tracking Generator) is required.

Question	Answer												
	<p>Both FieldFox units (the one used as the source, and the other used as the receiver) must have the options listed above. The ERTA option (209) cannot be installed unless 210 and 233 are present on a combo analyzer; or 220 is present on a SA analyzer.</p> <p>With either the Combo or SA FieldFox units, the following options are highly recommended:</p> <ul style="list-style-type: none"> Option 235, preamplifier – this option increases the measurement dynamic range by increasing the received signal power Option 307, GPS receiver – this option increases the dynamic range by increasing the frequency accuracy and permitting the use of a narrower RBW <p>B. Power splitter, two-resistor model, Keysight 11667A, 11667B, or 11667C. Other power splitters can be used but the specifications listed are based on the match and tracking performance of 11667A, 11667B, or 11667C. Three-resistor power splitters are not recommended.</p> <p>C. N9910X-712, Trigger/Reference-in cable, SMA (m) to BNC(f), 1 m, quantity two</p> <p>D. N9910X-713, Trigger/Reference-out cable, SMB (m) to BNC (m), 1 m, quantity two</p> <p>E. LAN connection – For ERTA, the two FieldFox units communicate via a LAN connection. For a direct connection, a cross-over LAN cable is required. Alternately, both analyzers can be on a local area network.</p> <p>Recommended Accessory</p> <p>F. N9910X-825, GPS Antenna. Necessary if Option 307 is ordered.</p>												
10. What is included with Option 355?	FieldFox analog demodulation has two parts: (1) Tune and listen, and (2) AM/FM metrics. Tune and listen is available with the purchase of the spectrum analyzer option 233. AM/FM metrics becomes available when Option 355 is purchased. AM/FM metrics provides the user with RF spectrum view, demodulated baseband signal waveform, carrier power, frequency deviation, SINAD and more.												
11. What is included with Option 350?	Real-Time Spectrum Analyzer (RTSA) or Option 350 provides real-time measurements on a FieldFox. The FieldFox must be equipped with spectrum analysis capability. The preamplifier option is recommended, as elusive signals often have low power levels. The maximum real-time bandwidth for option 350 is up to 120 MHz with option B10. RTSA includes trace recording and playback capabilities. It does not include a frequency-mask trigger (FMT).												
12. Is Spectrum Analyzer Trace Recording and Playback standard or an option?	<p>Spectrum Analyzer mode (Option 233) does not include Trace Recording and Playback by default. To obtain this capability in SA mode, Option 236 Interference Analyzer and Spectrogram needs to be purchased.</p> <p>RTSA mode (Option 350) does include Trace Recording and Playback by default in RTSA mode.</p> <p>Purchasing RTSA mode (Option 350) does not enable Trace Recording and Playback in SA mode (Option 233).</p> <table border="1"> <thead> <tr> <th>Trace Record/Playback Features</th> <th>SA Mode SA and Interference Analyzer Options 233 and 236</th> <th>RTSA Mode RTSA Option 350</th> </tr> </thead> <tbody> <tr> <td>Record and playback spectrum traces</td> <td>Yes</td> <td>Yes</td> </tr> <tr> <td>Save trace data with GPS time stamp over time</td> <td>Yes</td> <td>Yes</td> </tr> <tr> <td>Record and playback spectrogram data</td> <td>Yes</td> <td>No ¹</td> </tr> </tbody> </table>	Trace Record/Playback Features	SA Mode SA and Interference Analyzer Options 233 and 236	RTSA Mode RTSA Option 350	Record and playback spectrum traces	Yes	Yes	Save trace data with GPS time stamp over time	Yes	Yes	Record and playback spectrogram data	Yes	No ¹

13. What are the requirements for Noise Figure (NF) Option 356?	Requires spectrum analyzer mode (Option 233 on combination models), internal preamplifier (Option 235) and DC bias variable voltage source (Option 309) as well as CPU2 processor. An external noise source is also required and FieldFox supports Keysight noise source models 346A/B/C/K40/K01. Also recommended to improve accuracy is an external preamplifier Keysight models U7227A/C/F or U7228A/C/F. Requires accessory item N9910X-713 BNC to SMB cable for DC bias variable voltage source to noise source connection.												
14. What is required for phased array antenna support (Option 360) and 5G NR Over-the-Air (OTA) measurements (Option 378)?	Requires spectrum analyzer mode (Option 233 on combination models) and GPS receiver (Option 307). Highly recommend internal preamplifier (Option 235). N995x/6xB models are required since phased array antenna, which can be ordered as Keysight 85571A-028 or directly from Anokiwave as AWMF-0129, operates at 28 GHz.												
15. What is included with indoor and outdoor mapping (Option 352)?	The FieldFox mapping function is available in the following modes: Channel Scanner (312), Phased-Array Antenna (360), and OTA LTE FDD/TDD (370/371), OTA 5G TF (377), OTA 5G NR (378). Mapping is currently not available in SA or RTSA modes. Outdoor mapping requires the availability of GPS (Option 307). Maps can be saved to the FieldFox internal memory, SD card or USB drive. Using a direct wired LAN connection, FieldFox will automatically access OpenStreetMap (OSM) once location coordinates (latitude and longitude) and zoom levels have been entered the Map Explorer menu. If using the I FieldFox Map Support Tool, OSM map files can be downloaded to a .zip file and imported to FieldFox internal memory. If the FieldFox GPS receiver is enabled and OSM maps have been previously saved to FieldFox with those GPS coordinates, FieldFox can automatically load the corresponding map to match the current GPS coordinates.												
16. What is required for EMF measurements (Option 358)?	Requires triaxial antenna. Supported antenna is AGOS advanced technologies Triaxial Isotropic Antenna model SDIA-6000 30 MHz to 6 GHz. It can also be ordered as Keysight 85572A. EMF measurements are supported with spectrum analyzer mode (Opt 233 on combination models), OTA LTE FDD/TDD (Opt 370/371) and OTA 5G NR (Opt 378).												
17. What is required for N6820ES Surveyor 4D software? FAQs – Applicable to All FieldFox RF and Microwave Analyzers

Question	Answer		
A. What USB power sensors work with Option 302?	All Keysight U2000x Series USB power sensors are supported with FieldFox. Visit: www.keysight.com/find/fieldfoxsupport for an up-to-date listing.		
B. What is the difference between USB power sensor (Option 302) and built-in power meter (Option 310)?	Option 302 USB Power Sensor	Option 310 Built-In Power Meter (Or Channel Power Meter)	
	Description	Option 302 allows users to connect a USB power sensor to FieldFox's USB port and make broadband power measurements	Option 310 is a channelized power measurement capability built into FieldFox analyzers. Maximum bandwidth is 100 MHz.
	External hardware	USB power sensor required	None. Uses internal receiver.
	Power measurement	Broadband diode detector measures all frequencies	Tuned receiver, so measures frequencies within defined channel bandwidth
	Frequency range	Depends on USB sensor	Frequency range of the analyzer
	Settings	Set CW frequency	Set CW frequency, set channel width/span
	Power range	Depends on USB sensor	Depends on channel width and attenuator setting
	Warm-up time	30 minutes to meet accuracy specifications	No warm-up time required
	Accuracy	Depends on USB sensor	InstAlign accuracy: ± 0.5 dB typical for a CW signal. Since the measurement is within a certain frequency channel or bandwidth, to make an accurate measurement, the user needs to know the exact center frequency and the signal's bandwidth and set those accurately.
	Programmable	Yes, via SCPI	Yes, via SCPI
Physical connection	The power sensor can easily be moved to the measurement point, with a USB cable connecting the detector to FieldFox.	The measurement point needs to be connected to FieldFox's RF input port. If an RF jumper cable is used, the user needs to account for the loss of the cable with an offset value (can be entered into the analyzer).	
FieldFox source control	Yes, on/off, and nominal power level control	No access to FieldFox's source from the built-in power meter mode	

Question	Answer
