

# Processor and Bus Support for Agilent Technologies Logic Analyzers

**Configuration Guide**  
Tools to Accelerate Your Debugging Process  
May 1, 2000

Configuring a logic analysis system for your specific application is as easy as one, two, three. To configure a system you must select products that will 1. Probe, 2. Acquire, and 3. Analyze the data from your system. The following figure gives a quick overview of typical system considerations.

Use the information in each of the sections listed to help you configure a system that will meet your specific measurement needs.

## 1. Probing

The physical and electrical connection to target signals

## 2. Acquisition

Data capture, stimulus and processor control

## 3. Analysis

View and analyze data in a form you easily understand to help debug problems faster

Accurate measurements start with reliable probing. Agilent Technologies offers a wide variety of probing accessories to support your measurement needs making it easy to connect your Agilent logic analyzer to your designs.

### Probing Adapters

- General Purpose Lead Set
- High-density termination adapters
- Processor specific analysis probes

### Frames with built-in acquisition or measurement modules

- State/Timing Analyzers
- Oscilloscopes
- Pattern Generators

### Analysis Tools

- Post-processing Tool sets
- Debuggers

Innovating the HP Way

## How To Determine Your Probing Needs

To determine what probing method is best to use you need to evaluate your needs and take the following into consideration:

- Number of signals to be probed
- Ability to design probing connectors into the target
- Probing clearance requirements
- Available probing devices
- Signal loading
- Ease of installation
- Package type
  - DIP Dual Inline Package
  - PGA Pin Grid Array
  - BGA Ball Grid Array
  - PLCC Plastic Leaded Chip Carrier
  - PQFP Plastic Quad Flat Pack
  - TQFP Thin Quad Flat Pack
- Package Pin Pitch (distance between centers of adjoining pins)
- Pin count

### Probing Options:

**General purpose:** Use as a convenient way to access individual signals anywhere on the target.

**Custom Probing - Designed Into the Target:** Consider placing probing connectors directly on the target during board layout. Design for testability. (See pg 3)

**IC Package Adapters:** Simple means of connecting to all the pins of a PQFP or TQFP package. (See pg 4)

**Device Specific:** Probe devices specifically designed for processors, DSPs, busses, and programmable logic devices. (See pg 5)

## Probing – General Purpose

General Purpose Lead Set: 01650-61608

### The Agilent Technologies wedge probe

The Agilent wedge probe adapter provides mechanically sound, noninvasive connection to adjacent pins on TQFP and PQFP packages. Connect logic analyzer flying leads directly to the adapter; connect scope probes through a dual-head adapter.

Number of Signals	Pin Pitch	Agilent Product #	Number of Agilent Wedges Included
3	0.5 mm	E2613A	1
3	0.5 mm	E2613B	2
8	0.5 mm	E2614A	1
16	0.5 mm	E2643A	1
3	0.65 mm	E2615A	1
3	0.65 mm	E2615B	2
8	0.65 mm	E2616A	1
16	0.65 mm	E2644A	1

# Probing – Custom Probing (Designed into the Target System)

## Designing a Probing Solution for Unique Applications

You can design test connections into your circuit using test headers with termination adapters. Details of how to do this are shown in *Probing Solutions for Agilent Technologies Logic Analysis Systems*, publication number 5968-4632E.

**01650-63203**  
16 data channels  
1 clock channel

### Agilent E5346A High-density termination adapter

32 data channels  
2 clock channels

### Mictor Connectors for High-density termination adapters

Product Number	Description
01650-63203	Standard Termination Adapter

Agilent Product Number	Description
E5346A	High-Density Termination Adapter
E5351A	High-Density Adapter
E5346-44701	Recommended Support Shroud
E5346-60002	High Speed Mictor Break-out Adapter
E5346-68701	Five Mictor Connectors and Five Support Shrouds

# Probing – TQFP, PQFP Adapters

Agilent Technologies' state-of-the-art probe adapters offer a simple means of connecting to PQFP and TQFP packages with minimal "keep out" area. Agilent's reliable probes ensure trouble-free electrical and mechanical connection.

## Elastomeric Probe Adapter

Package Adapter	Pin Pitch	Elastomeric Probe	1/4 Flex Adapter
144-pin TQFP	0.5 mm	E5336A	E5340A
144-pin PQFP/CQFP	0.65 mm	E5361A	E5340A
160-pin QFP	0.5 mm	E5377A	E5349A
160-pin PQFP/CQFP	0.65 mm	E5373A	E5349A
176-pin TQFP	0.5 mm	E5348A	E5349A
208-pin PQFP/CQFP	0.5 mm	E5374A	E5371A
240-pin PQFP/CQFP	0.5 mm	E5363A	E5371A

# Probing – Device Specific (Processors, DSPs, Controllers, Busses, and Programmable Logic Devices)

This document lists available processor and bus support products from Agilent Technologies and complementary vendors. Agilent and our partners provide an extensive range of quality tools that offer non-intrusive, full-speed, real-time analysis and processor execution control to accelerate your debugging process. The following steps help you to determine the necessary products to meet your specific measurement needs.

## Simply:

1. Determine if your device is supported (pg 5)
2. Select the products that meet your measurement needs (pg 5)
3. Verify analyzer support and compatibility (pg 8)

The following provides information on how to use the matrix starting on page 18 to accomplish each step.

### 1. Determine if your device is supported

#### Device Coverage

Device Manufacturer or Architecture and Name	Max Bus Clk MHz	Pin Count, Pkg Type
--	-----------------	---------------------

- Use the “Device Coverage” section of the matrix to find your processor, controller, bus, or programmable logic device. Processors are listed alpha-numerically, except for Intel and Motorola, where processors are grouped by family.
- The value in the ‘Max Bus Clk MHz’ column refers to the maximum supported external bus speed for the processor. In most cases this is not the speed of the processor.

*Example:* Pentium with MMX has core speeds up to 233 MHz, but the external bus speed is 66 MHz.

- Supported package types are listed. In some cases an inverse assembler is separately available when the probing can be designed into the target. Check the notes for available probing application notes and product literature for clearance requirements and target considerations.

Contact Agilent Technologies if you do not see support for your specific device. A sales representative can:

- determine if support is under development
- recommend third parties that design custom solutions
- direct you to information on how to design a test solution (refer to the probing section in this document)

### 2. Select the product(s) that meet your measurement needs.

#### Product Information

Product Type	Timing	State	Enhanced IA	Emulation	Setup Assist	3rd Party Vendor or Agilent Product Number
--------------	--------	-------	-------------	-----------	--------------	--

The “Product Information” section of the matrix lists the available products for each device. The diagrams and tables on pages 6-7 give a high level overview of what each product type includes, provides, and requires as well as specifying compatibility.

The following describes the different measurement modes.

**Timing** – Data is sampled at regular intervals by the analyzer’s internal clock. The captured trace is displayed as waveforms (asynchronous).

**State** – Clocking is supplied by the system under test and captured data is displayed as a sequential listing of logical states (synchronous). Included inverse assemblers convert the real-time trace into processor mnemonics.

**Enhanced Inverse Assembler** –Provides advanced filtering capabilities such as removal of unexecuted prefetches and certain cycle types. The specific filtering capabilities are processor dependent. Refer to the product literature for details.

**Emulation** – The product provides processor control including break, run, reset and single step, code download, and register/memory modification.

**Setup Assistant** – A menu driven interface that guides you through connecting and configuring a processor measurement. This feature is available on the Agilent 16600A and 16700 series frames.

### Contact Agilent or the Appropriate Third Party for Your Selections

Contact an Agilent Technologies sales representative to order the products you have selected or to obtain more information. Agilent sales information as well as third-party contact information is listed on pg 54.

# Real-Time Trace Products

**Inverse Assembler**  
Software that converts a captured state trace into processor mnemonics.

**Analysis Probes**  
(Formerly called Preprocessors)

**N-Trace Analysis Probe**

## Emulation Solution

**Emulation Solution**

Option required to specify processor package type (Bundle of processor products for easier ordering and configuration. Works with the Agilent 16600A and 16700 series logic analyzers).

Inverse Assembler	
Includes	<ul style="list-style-type: none"> <li>Inverse assembler software</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Converts real-time trace into processor mnemonics</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Method for connecting to the processor either through the general purpose probes or through connectors designed onto the target</li> </ul>

Analysis Probe	
Includes	<ul style="list-style-type: none"> <li>Inverse assembler (for analysis probes that support state mode) and configuration files</li> <li>Analysis probe hardware (unless specified as inverse assembler only)</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Mechanical and electrical connection to the processor or bus</li> <li>Real-time trace acquired in state and/or timing (supported modes of operation varies, check matrix for specific processor)</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Appropriate logic analyzer channel count (refer to matrix)</li> </ul>

N-Trace Analysis Probe	
Includes	<ul style="list-style-type: none"> <li>E5346A cable, JTAG breakout board and configuration software</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Runtime trace information through special messages (status) and data</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Agilent 16600A or 16700 series frame with appropriate state/timing module</li> <li>Debugger (available on your platform from third party)</li> </ul>

Emulation Solution	
Includes	<ul style="list-style-type: none"> <li>Agilent B4620B Source Correlation tool set</li> <li>Analysis Probe with any necessary package adapters and Inverse Assembler</li> <li>Emulation Module</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Correlation of real-time trace to high level source code</li> <li>Ability to set the logic analyzer trigger by clicking a line of source code</li> <li>Real-time trace acquired in state and/or timing (supported modes of operation varies, check table for specific processor)</li> <li>Processor control including break, run, reset and single step</li> <li>Code download</li> <li>Register/memory modification</li> </ul>
Requires	<ul style="list-style-type: none"> <li>"A" versions require Agilent 16600A or 16700 series frame with an available emulation module slot</li> <li>"B" versions require an Agilent 16700 Series frame with an available emulation module slot.</li> <li>Option to specify processor package type.</li> </ul>
Compatibility	<ul style="list-style-type: none"> <li>Debugger (available on your platform from a third party)</li> <li>"A" versions work with Agilent 16600A and 16700 standard Emulation Control Interface</li> <li>"B" versions work with Agilent 16700 standard Emulation Control Interface</li> </ul>

# Emulation Products

**Emulation Probe - Agilent E5900A/B**  
 (Formerly called Processor Probe or Software Probe)  
 Option required to specify processor family

**Emulation Module - Agilent E5901A/B**  
 Option required to specify processor family

**Emulation Migration - Agilent E5902A/B**  
 Option required to specify processor family

**Trace port analyzer - Agilent E5903A**  
 Option required to specify processor family

Emulation Probe- Agilent E5900A/B	
Includes	<ul style="list-style-type: none"> <li>Standalone emulation probe, Target Interface Module (TIM), cables and firmware</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Processor control including break, run, reset and single step</li> <li>Code download</li> <li>Register/memory modification</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Option to specify processor family</li> </ul>
Compatibility	<ul style="list-style-type: none"> <li>Debugger (available on your platform from third party)</li> <li>E5900A works with Agilent 16600A and 16700 standard Emulation Control Interface</li> <li>E5900B works with Agilent 16700 standard Emulation Control Interface</li> <li>Controlled over LAN</li> </ul>

Emulation Module- Agilent E5901A/B	
Includes	<ul style="list-style-type: none"> <li>Emulation Module, Target Interface Module (TIM), cables and firmware</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Processor control including break, run, reset and single step</li> <li>Code download</li> <li>Register/memory modification</li> </ul>
Requires	<ul style="list-style-type: none"> <li>E5901A works with Agilent 16600A and 16700 series mainframes with an available emulation module slot</li> <li>E5901B works with Agilent 16700 series mainframe with an available emulation module slot</li> <li>Option to specify processor family</li> </ul>
Compatibility	<ul style="list-style-type: none"> <li>Debugger (available on your platform from third party)</li> <li>E5901A works with Agilent 16600A and 16700 standard Emulation Control Interface</li> <li>E5901B works with Agilent 16700 standard Emulation Control Interface</li> </ul>

Emulation Migration- Agilent E5902A/B	
Includes	<ul style="list-style-type: none"> <li>Target Interface Module (TIM), cables and firmware</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Processor personality change for existing emulation module or probe</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Existing emulation module or probe</li> <li>Option to specify processor family</li> </ul>

Trace port analyzer- Agilent E5903A	
Includes	<ul style="list-style-type: none"> <li>Trace port analyzer module, Target Interface Module (TIM), power supply, and cables</li> </ul>
Provides	<ul style="list-style-type: none"> <li>Runtime trace information through special messages (status) and data</li> </ul>
Requires	<ul style="list-style-type: none"> <li>Emulation probe or emulation module</li> </ul>
Compatibility	<ul style="list-style-type: none"> <li>Debugger (available on your platform from third party)</li> </ul>

# Logic Analysis Systems (Acquisition)

## 3. Verify analyzer support/compatibility

Agilent Technologies

Logic Analyzer Support

 Products Discontinued

Min # Pods for IA / Max # Pods	16700A/B Series with ...	16600A Series	16500C with ...	1670G Series
		1675/6/7/8/9 16550, 16710/12 16557	16600 16601 16602 16603	16550 16557

Use the “Logic Analyzer Support” section of the matrix to determine compatibility between the processor support product(s) you have selected and an existing analyzer to decide which frame and/or modules to purchase.

- The matrix lists a minimum and maximum number of pods for analyzing a device. The minimum pod count provides enough signals for the inverse assembler to interpret the captured data and display processor mnemonics. The maximum pod count provides access to additional signals that could be useful during system debug.

*Example:* The MPC860 BGA shows 6/12 which means the analysis probe requires 6 pods for inverse assembly. Six additional pods (for a total of twelve pods) could be used for analysis of additional signals.

- The analyzer support recommendations are based on the minimum pod count required for inverse assembly. Two methods are used for signifying analyzer support. A number represents the number of modules required. A check mark (√) signifies the analyzer has enough built-in acquisition channels to meet the minimum pod requirements.

Your mainframe and measurement module selection depends on:

- Number of analysis channels needed
- Optional measurement ability
- Future expansion capability
- Emulation requirements
- Form factor
- Budget

### Frame offerings:

**Agilent Technologies 16700B Series (pg 9):** 5 Slot modular frame with expansion capability, supports 1 emulation module or 1 multiframe module.

**Agilent Technologies 16700A Series (pg 10):** 5 slot modular frame with expansion capability, supports 2 emulation modules.

**Agilent Technologies 1670G Series (pg 14):** Benchtop analyzer with built-in acquisition. Choices include logic analyzer, logic analyzer with integrated pattern generator, and logic analyzer with integrated oscilloscope. Versions of each vary by channel count.

High level details are provided in this document for the logic analysis systems and modules. If more information is needed, please obtain the following documents.

Agilent Technologies Product	Literature
Agilent Technologies 16700 Series Logic Analysis System	5968-9661E
1670G Series Benchtops	5968-6421E

# Agilent Technologies 16700B Series Mainframes

## Agilent 16702B

Agilent Model Number	Agilent 16702B
Display	12.1" 800x600 Color Flat Panel Display with touchscreen
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	1 (Total of 3 with 16701A or 16701B expansion frame)
Internal System RAM	128 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	9 Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	40X Built-in standard

## Agilent 16700B

Agilent Model Number	Agilent 16700B
Display	Monitor sold separately
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	1 (Total of 3 with 16701A or 16701B expansion frame)
Internal System RAM	128 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	9Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	40X Built-in standard

## Agilent 16701B

Agilent Model Number	Agilent 16701B (Requires Agilent 16702A, 16702B, 16700A, or 16700B)
Display	N/A
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	N/A
Available Measurement Module slots	5
Available Emulation Module slots	2

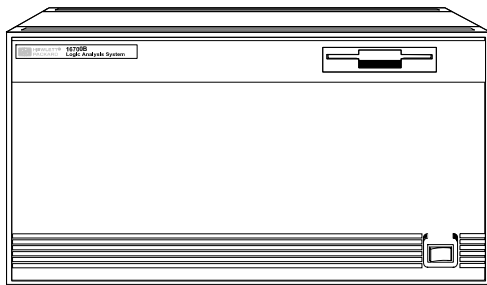

# Agilent Technologies 16700A Series Mainframes

## Agilent 16702A

Agilent Model Number	Agilent 16702A
Display	10.3" 800x600 Color Flat Panel Display
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	2 (Total of 4 with 16701A or 16701B expansion frame)
Internal System RAM	64 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	4 Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	Available via Option #004

## Agilent 16700A

Agilent Model Number	Agilent 16700A
Display	Monitor sold separately
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	2 (Total of 4 with 16701A or 16701B expansion frame)
Internal System RAM	64 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	4Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	Available via Option #004

## Agilent 16701A

Agilent Model Number	Agilent 16701A (Requires Agilent 16702A, 16702B, 16700A, or 16700B)
Display	N/A
Built-in Analysis Channels	None – Requires measurements
Supports Expansion frame	N/A
Available Measurement Module slots	5
Available Emulation Module slots	2

### Agilent 16700A Series Logic Analysis Systems Options

Option Number	Description
#001	Add 17", 1280x1024 Monitor and cable
#003	4 Mbyte video RAM supports up to 1600x1200 resolution, 256 Mbyte system RAM (Only available at time of frame purchase)
#004*	Add external CD-ROM Drive and cable (Agilent 16700A series frames only)
#008	186 B External data drive
#009	External removable hard drive
#012	Multi-frame module for correlating multiple frames
#0B3	Service Manual
#1CM	Rackmount Kit for 16700A, 16702A, 16700B
#AXC	Rackmount Kit for 16702B

\*Built-in CD-ROM Drive standard on 16700B series

### Agilent 16600A, 16700A, and 16700B Series Supported Measurement Modules

Measurement Module Category	Agilent Model Number	Description
State and Timing	16719A*	333 MHz state, 667 MHz timing, 2 GHz TimingZoom, 32/64 M memory depth
	16718A*	333 MHz state, 667 MHz timing, 2 GHz TimingZoom, 8/16M memory depth
	16717A*	333 MHz state, 667 MHz timing, 2 GHz TimingZoom, 2/4 M memory depth
	16716A*	167 MHz state, 667 MHz timing, 2 GHz TimingZoom, 512K/1M memory depth
	16715A*	167 MHz state, 667 MHz timing, 2/4 M memory depth
	16710A/11A/12A	100 MHz state, 500 MHz timing, 8K/32K/128K deep memory depth
	16557D	140 MHz state, 500 MHz timing, 2/4 M memory depth
	16556A/D	100 MHz state, 400 MHz timing, 2/4 M memory depth
	16555A/D	110 MHz state, 500 MHz timing, 2/4 M memory depth
	16554A	100 MHz state, 250 MHz timing, 512 K/1M memory depth
Oscilloscopes	16550A	100 MHz state, 500 MHz timing, 4/8 K memory depth
	16534A	2 channel, 500 MHz bandwidth
High-Speed Timing	16533A	2 channel, 250 MHz bandwidth
	16517/18A	4 GHz timing/1 GHz synchronous state, 64K memory depth (master/expander)
Pattern Generator	16720A*	300M vector/second pattern generator
	16522A	200M vector/second pattern generator

\*Only supported in Agilent 16700A or 16700B Series

## Measurement Modules

- State/Timing
  - Oscilloscope
  - High-Speed Timing
  - Pattern Generator
- (Require mainframe with available measurement module slot)

State and timing logic analyzers support inverse assembly, which is used for most processor and bus measurements. You may want to consider additional measurement capability to provide a complete signals to source debug environment.

## State/Timing Logic Analysis Modules

(Select according to channel count, acquisition speed, and memory depth needs)

Agilent Model Number	Agilent 16557D		Agilent 16710A	Agilent 16711A	Agilent 16712A
	1-4 Modules	5 Modules			
Channels (Pods) per module	68 (4 Pods)		102 (6 Pods)	102 (6 Pods)	102 (6 Pods)
Maximum channels (modules) on a single time base and trigger	272 (4 modules)	340 (5 modules)	204 (2 modules)	204 (2 modules)	204 (2 modules)
Maximum Timing Sampling Rate (full/half channels)	250/500 MHz		250/500 MHz	250/500 MHz	250/500 MHz
Maximum State Clock	140 MHz	100 MHz	100 MHz	100 MHz	100 MHz
Memory depth (full/half channels)	2 / 4 M *		8 / 16K*	32 / 64K*	128 / 256K*

Agilent Model Number	Agilent 16715A	Agilent 16716A	Agilent 16717A	Agilent 16718A	Agilent 16719A
Channels (Pods) per module	68 (4 Pods)	68 (4 Pods)	68 (4 Pods)	68 (4 pods)	68 (4 pods)
Maximum channels (modules) on a single time base and trigger	340 (5 modules)	340 (5 modules)	340 (5 modules)	340 (5 modules)	340 (5 modules)
Maximum Timing Sampling Rate (full/half channels)	333/667 MHz	333/667 MHz 2 GHz Timing Zoom	333/667 MHz 2 GHz Timing Zoom	333/667 MHz 2 GHz Timing Zoom	333/667 MHz 2 GHz Timing Zoom
Maximum State Clock	167 MHz	167 MHz	333 MHz	333 MHz	333 MHz
Memory depth (full/half channels)	2 / 4 M *	512K / 1 M*	2/4 M*	8/16 M*	32/64 M*

\* Increased memory depth in half channel timing mode only.

## Oscilloscope Modules

Agilent Model Number	Agilent 16533A	Agilent 16534A
Channels/Module	2	
Channels on a single time base and trigger	8	
Maximum Sample Rate	1 GSa/s	2 GSa/s
Bandwidth	250 MHz	500 MHz
Vertical Resolution	8 bits	
Memory Depth per channel	32 K	

## High-Speed Timing Module

Agilent Model Number	Agilent 16517A/18A (Agilent 16518A requires Agilent 16517A, Max of 4 Agilent 16518A expander modules per Agilent 16517A)
Channels/module	16
Maximum channels on a single time base	80
Maximum timing sample rate	Conventional 2/4 GHz (full/half channels)
Maximum state sample rate	1 GHz Synchronous State
Memory Depth	64/128K* (full/half channel)

\* Increased memory depth in half channel timing mode only.

## Pattern Generator Module

Agilent Model Number	Agilent 16522A			Agilent 16720A	
	Up to 5 modules can be interconnected. Order at least one clock pod for each module used as a master, and at least one data pod for every 8 output channels			Up to 5 modules can be interconnected. Order at least one clock pod for each module used as a master, and at least one data pod for every 8 output channels	
Maximum Clock	200 MHz	100 MHz	50 MHz	300 MHz	180 MHz
Number of data channels per module	20	40	40	24	48
Maximum vector width (5 module system)	100 bits	200 bits	200 bits	120 bits	240 bits
Memory depth, in vectors	258,048			16M	8M
"IF" command	No	No	Yes	No	No

## Pattern Generator Clock and Data Pods

Agilent 16522A, 16720A Option Number	Description
#011	TTL Clock Pod and Lead Set
#012	3-State TTL/3.3V Data Pod and Lead Set
#013	3-State TTL/CMOS Data Pod and Lead Set
#014	TTL Data Pod and Lead Set
#021	ECL Clock Pod and Lead Set
#022	ECL (Terminated) Data Pod and Lead Set
#023	ECL (Unterminated) Data Pod and Lead Set
#031	5V PECL Clock Pod and Lead Set
#032	5V PECL Data Pod and Lead Set
#033	3.3V LVPECL Clock Pod and Lead Set
#034	3.3V LVPECL Data Pod and Led Set

## 1670G Benchtop Analyzers

Agilent Model Number	Agilent 1670G	Agilent 1671G	Agilent 1672G	Agilent 1673G	Agilent 1664A
State and Timing Channels (Pods)	136 (8 Pods)	102 (6 Pods)	68 (4 Pods)	34 (2 Pods)	34 (2 Pods)
Timing Analysis	Conventional: 250 MHz all channels, 500 MHz half channels				
State Analysis Speed	150 MHz, all channels				50 MHz
Memory Depth per Channel	64K per channel, 128K in half-channel mode				4K
Option 001	256K per channel, 512K in half-channel mode				
Option 002	2M per channel, 4M in half-channel mode				

### Oscilloscope key specifications and characteristics

#### (Option # 003 only)

Channels	2
Maximum Sample Rate	2 GSa/s per channel
Bandwidth	dc to 500 MHz (dc coupled)
Rise Time	700 ps
Vertical Resolution	8 bits
Memory Depth per Channel	32k samples

### 32-channel pattern generator key specifications and characteristics

#### (Option # 004 only) (See pg 13 for clock and data pod options)

Maximum Clock Speed	200 MHz	100 MHz	50 MHz
Number of Data Channels	16	32	32
Memory Depth, in vectors	258,048		
"IF" Command	No	No	Yes

# Analysis Tools

 Products Discontinued

<b>Application Software</b>	<b>Frame Compatibility</b>					
Description	16700A/B Series	16600A Series	16500C	1670G Series	3rd Party Vendor or Agilent Product Number	Notes:
<b>Source Correlation Tool Set</b> The Source Correlation tool set provides a link between your trace listing and high-level source code language. A trace is displayed in both high-level source code as well as microprocessor mnemonics.	√	√			Agilent B4620B	Product Literature: 5968-9661E
<b>Data Communications Tool Sets</b> Displays logic analyzer trace information at a protocol level. The data communications powerful trigger tool set macros allow triggering on standard or custom protocol fields. Supports data buses up to 340 bits wide.	√ (Only works with 16715/6/7/8/9 state and timing modules)				Agilent B4640B	
<b>Tool Development Kit - Customize your trace for greater insight.</b> Development environment for creating custom tools using the C programming language. Custom tools can analyze captured data and present it in a form that makes sense to you. Analysis systems do not require the Tool Development kit to run generated tools.	√	√			Agilent B4605B	
<b>System Performance Analysis (SPA) Tool Set</b> The SPA tool generates statistical representations of data captured by the measurement modules. SPA helps you optimize system performance by helping you (1) find the routines that are called most often in your system, (2) identify inefficient peripheral use, and (3) find processes that use too much CPU time.	√	√			Agilent B4600B	
<b>Serial Analysis Tool Set</b> Converts acquired serial bit streams to parallel format for easy viewing and analysis.	√	√			Agilent B4601B	
<b>BestLink/16700</b> BestLink/16700 is a powerful and easy to use bidirectional data link between Agilent Logic Analyzers and VHDL/Verilog simulators. BestLink/16700 processes very fast the large datasets typically acquired with the large memory depths state/timing Logic Analysis modules such as the Agilent 16557D or large simulation datasets to program the Agilent 16552A pattern generator modules.	√				Diagonal Systems	Free Demo Available www.diagonal.com
<b>WAVE-Link 16500</b> WAVE-Link allows you to send stimulus to the Agilent 16522A pattern generator or capture circuit response from the actual hardware with the logic analyzer modules.			√		Diagonal Systems

Application Software Description	Frame Compatibility				3rd Party Vendor or HP Product Number	Notes:
	16700A Series	16600A Series	16500C	1670G Series		
<b>WaveFormer Pro</b> WaveFormer Pro can read the waveform files produced by Agilent's logic analyzers into its timing diagram editing and simulation environment. Users can document the captured waveforms or generate simulation stimulus files in VHDL, Verilog, SPICE, ABEL, and other waveform formats. Simulation supports continuous setup and hold checking on captured waveforms. WaveFormer Pro can also produce stimulus for the Agilent 16522A or 16720A Pattern Generator.	√	√	√	√	SynaptiCAD	Free Demo Available <a href="http://www.syncad.com">www.syncad.com</a>
<b>VeriLogger Pro</b> VeriLogger Pro is a full featured Verilog simulator with an integrated waveform viewer which supports Agilent Logic Analyzers and Agilent Pattern Generators. Agilent waveform files can be combined directly with simulation models. The project environment supports multiple Agilent waveform files and provides waveform comparison.	√	√	√	√	SynaptiCAD	
<b>TestBench Pro</b> TestBench Pro is a VHDL/Verilog test bench and bus-functional model generator. It can take several Agilent logic analyzer waveform files and combine them to produce reactive bus-functional models of the system under test. Supports waveform comparison, continuous setup and hold checking, and spot sample checking.	√	√	√	√	SynaptiCAD	

## Third Party Debugger Support

Debuggers from several companies control Agilent Technologies emulation probes and emulation modules. Connections to Agilent debugging tools through familiar interfaces provide access to emulation features so that in-circuit debugging becomes an extension of the software debugging process under way.

The following debuggers connect to Agilent emulation probes and emulation modules providing support for a variety of processor architectures and real-time operating systems. Contact your Agilent sales representative for detailed connection information.

Processor Family	Available Debuggers
ARM 7,9 Thumb®	ARM,GHS,WindRiver
ARM 7,9 - ETM	ARM, GHS
IBM PPC4XX	Microtec/Mentor, SDS, WindRiver
IBM PPC6XX	GHS, Microtec/Mentor, SDS, WindRiver
IBM PPC7XX	GHS, Microtec/Mentor, SDS, WindRiver
Pentium and Pentium w/MMX processors	CAD-UL
Pentium II, Pentium Pro and Pentium II mobile processor	American Arium
Motorola MPC5XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC6XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC7XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC7400	GHS
Motorola MPC8XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola MPC82XX	GHS, Microtec/Mentor, SDS, WindRiver
CPU32	GHS, Microtec/Mentor, SDS
M-core	SDS, GHS
Toshiba Tx19/39	GHS

## Example Configuration

### Measurement Requirements

Your target has an MPC 860 in a BGA package. You need to capture real time traces as well as control the processor. What tools are available to support this processor?

- Determine if your device is supported.  
Search through the matrix alphabetically. Note that your processor is listed on pg. 36. The MPC 860 section of the matrix is shown below.
- Select the product(s) that meet your measurement needs  
The matrix lists several available products. Use pages 6-7 to review each product type's abilities. The E9484B #002 emulation solution provides the measurement capabilities you desire for the MPC 860 BGA. Refer to the literature listed in the notes to verify clearance requirements for the analysis probe.
- Verify analyzer support and compatibility  
The matrix shows that for the E9484B #002 the logic analyzer choices are the Agilent 16700A/B Series with a selection of modules. "MPC860 Configuration Solution" lists products for a complete solution.

### MPC860 Configuration Solution

**Frame:** Agilent 16700B  
Agilent 16700B #001 Monitor  
Agilent 16700B #003 Memory Performance Upgrade  
256 MB total RAM, 4 MB video RAM

**Acquisition:** Agilent 16717A (Quantity 2 for minimum configuration, quantity 3 to cover all of the pins)

**Processor Support:** Agilent E9484B #002 (Includes Emulation Module, Analysis Probe, and Source correlation tool set.)  
Debugger (from third party)

**Optional Measurement Modules:** Agilent 16534A Oscilloscope  
Agilent 16720A Pattern Generator for Stimulus

MPC505/509	160-PQFP		Anly Prb	√	√	√	E9585A #002	6/10	2	1	2	√	√	√		1	2	√	√		E9585A #002-Former product#E2490A E5900A#050-Former product#E3456A Inverse assembler supports trace reconstruction. The trace reconstruction tool makes use of indirect branch show cycles and reconstructs the full software trace. This allows the processor to run full-speed from internal flash or cache. Analysis Probe requires emulation module or probe to configure for address reconstruction. Analysis probe is four way rotatable. Emulation products can connect directly to BDM port via the analysis probe for the MPC 505/509. MPC555 requires a BDM port on the target. Custom probing application note for IA only analysis: 5968-2502E. Product Literature 5968-2504E

TMPR 1940	All	All	Emul Probe			√	E5900A #800												Analysis probe requires B3759A #800 for state analysis. For custom probing, B3759A #800 provides inverse assembly. E5903A #800 requires B3759A #800. E5903A #800 requires either emulation probe or emulation module. Emulation probe or module requires E5903A #800. The emulation products require a double row 20 pin connector on target. Refer to literature for specifications. Emulation solution does not include B4620B Source correlation tool set. Equivalent functionality is provided by B3759A #800. A debugger is also available from GHS. Product literature: 5968-2697E

**Standard Buses**

Consider the B4601B Serial Analysis tool set for your serial bus measurements. The serial analysis tool works with the 16600A and 16700 series logic analysis systems. The tool converts acquired serial bit streams to parallel format for easy viewing and analysis. It also allows you to process frame information to isolate the data you want to analyze. See the Application Software (pg. 15) section of this document for more details.

## Old to New Model Number Compatibility Table

### Analysis Probes

Former Product Number	Description	New Analysis Probe Product Number
E2448B	Motorola 68360 analysis probe for 241-pin PGA	E9590A #002
E8123A <sup>1</sup>	Motorola 68360 analysis probe for 240-pin PQFP	E9590A #003
E2449B	Motorola PowerPC 603 analysis probe. Inverse Assembler (custom probing only)	E9587A #001
E2455B	Motorola PowerPC 603 analysis probe for 240-pin PQFP	E9587A #002
E2457A	Intel Pentium analysis probe for 296-pin SPGA	E9592A #002
E2476B	Motorola MPC 860/821 analysis probe for 357-pin BGA	E9584B #002
E2477A	Motorola MPC 860/821 analysis probe. Inverse assembler (custom probing only)	E9584B #001
E2490A	Motorola 505/509 analysis probe for 160-pin PQFP	E9585A #002
E2493A	ARM7TDMI analysis probe. Inverse assembler (custom probing only)	E9595A #001
E2498A	Motorola MPC 740/750 analysis probe. Inverse assembler (custom probing only)	E9586A #001
E8115A <sup>2</sup>	Motorola 68331/2/4/5 analysis probe for 132-pin PQFP	E9589A #002
E8116A <sup>2</sup>	Motorola 68331/2/4/5 analysis probe for 144-pin TQFP	E9589A #003
E8118A <sup>2</sup>	Motorola 68336/76 analysis probe for 160-pin PQFP	E9596A #002

1. Comprised of E2448B and the necessary adapters.

2. Comprised of E2480A and the necessary adapters.

### Emulation Probes

Former Product Number	Description	New Emulation Probe Product Number
E3455A	Motorola M-Core emulation probe	E5900A #090
E3456A	Motorola MPC5XX emulation probe	E5900A #050
E3458A	Motorola 6833X4X/6X/7X emulation probe	E5900A #030
E3491B	Intel Pentium emulation probe	E5900A #500
E3493B	Intel Pentium II emulation probe	E5900A #510

### Third Party Contact Information

The following companies provide products that complement Agilent Technologies logic analyzers. Agilent works closely with these companies to insure quality products, but the third party is ultimately responsible for functionality, pre-sales support, post-sales support, and warranty. For companies listed below with a "resell code", their products are also available from Agilent's Corporate Price List. For resale products, the third party is still responsible for functionality, pre-sales support, post-sales support, and warranty.

**(For additional US and International Sales Offices, check the web site of the specific Channel Partner.)**

#### **ALD (Premier Channel Partner)**

**Warranty**

Agilent Technologies hardware products are warranted against defects in materials and workmanship for a period of one year from date of shipment. Some newly manufactured Agilent products may contain remanufactured parts, which are equivalent to new in performance. If you send notice of defects during the warranty period, Agilent will either repair or replace hardware products that prove defective.

Our software and firmware products that are designated by us for use with a hardware product are warranted for a period of 90 days to execute their programming instructions, when properly installed. If you send us notice of defects in materials and workmanship during the warranty period, we will repair or replace these products, so long as the defect does not result from buyer-supplied hardware or interfacing. The warranty period is controlled by the warranty statement included with the product and begins on the date of shipment.

**Agilent Technologies' Test and Measurement Support,  
Services, and Assistance**

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlay Agilent's overall support policy: "Our Promise" and "Your Advantage."

**Our Promise**

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

**Your Advantage**

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and on-site education and training, as well as design, system integration, project management, and other professional services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

By internet, phone, or fax, get assistance with all your test & measurement needs
