7. If the disability justifies an extension of the examination time, the responsible person on behalf of the Examination Board will register in SAP this entitlement to an extension. Section B2: Programme specific – content of programme

10. Programme objectives, tracks/specialisations, exit qualifications and language

Article 10.1 Programme objective

The bachelor Biomedical Sciences at the VU strives to equip students with a broad but solid scientific base in the area of the biology of health and disease in humans. The focus lies in doing scientific research towards the origins and courses of diseases, and the possible treatments and cures. Students attain academical knowledge, insights and skills, and they develop a critical, independent and reflective attitude. The knowledge that is offered covers all the organizational levels that can be discerned in biomedical sciences, from molecule to society. Exit qualifications have been composed that fit these descriptions. In line with the identity and core values of the VU, during their personal development students are inspired to think about their responsibility to society in their future profession. Attention is also given to the broad multidisciplinary character of the field which is open to the societal, spiritual and cultural influences, and respect and space is given to the diverse personal views that can accompany these core values. During the programme the student encounters scientific practice in the field of societal biomedical issues. Developing academic judgements and critical reflection on the values, functions, boundaries and effects of biomedical science is abundantly featured in the programme. Expertise that is acquired is offered through main topics and concepts in the international biomedical research field with extra emphasis for the core research pillars of the graduate schools of the VU and AUMC. Through independently and actively learning to do research, students get familiar with scientific culture and the practice of working in the field as a biomedical professional. The programme strives to offer approximately half of the contact hours in small scale groupwise education where students learn by investigating. During practicals, work groups and the internship, students are given tasks that are representative for the future work environment and are seen as serious partners during the development of novel ideas and insights. Finally, the programme offers ample space for the development of individual talents and ambitions. The programme is taught entirely in English so that it also offers room for topics like internationalization, diversity and inclusivity which are in line with the vision of the VU.
