

IMPACT RESISTANT FLIGHTS FOR S800 BELTING

Impact resistant Intralox® flights feature a single-piece, molded-in indent flush edge design for greater strength and durability. This robust design reduces the risk of breakage and foreign material in direct food contact applications.

The flights come standard with Series 800 Open Hinge Flat Top and Series 800 SeamFree™ Open Hinge Flat Top belt styles and are available in heights of 4 in (10 cm) or 6 in (15 cm). Additional flight styles, No-Cling Flat Top (pictured) and No-Cling Nub Top (not pictured) are also available up to heights of 4 in (10 cm).

BELTING BENEFITS

The Series 800 Open Hinge belt is designed to help reduce sanitation times, water usage, and manual labor needs. Easy-to-remove headed rods and cam-link designed hinges expose more hinge and rod area as the belt travels around the sprocket. This unique design creates more open area, allowing unsurpassed access for cleaning. The underside drive bar lets water and debris flow to the outside of the belt for faster cleanup, while the smooth, closed upper surface eliminates contamination risks.

IDEAL FOR A WIDE VARIETY OF FOOD-PROCESSING INDUSTRIES

- Meat
- Poultry
- Seafood
- Fruit and Vegetable
- Snack
- Ready-to-eat
