

STAY AHEAD OF THE CURVE

INTRALOX'S NEW S2400 RADIUS WITH HEAVY-DUTY EDGE

Radius belt edges are prone to breaking off and contaminating product due to improper belt handling, installation, and conveyor design. Additionally, as product throughput, line speeds, chemical usage, and sanitation requirements have increased, belts have experienced more wear and cycles around conveyors in shorter periods of time. Consequently, belts experience shorter lives.

Intralox overcame these challenges by designing a belt that minimizes edge breakage and paired that design with our patented Load-Sharing™ edge technology, which reduces downtime and extends belt life by minimizing fatigue failures. This design combination creates the S2400 Radius HDE, the best performing radius belt for the food industry.

Benefits

- **Longest lasting radius belt for the food industry**
- **Most fault-tolerant radius belt for the food industry**
- **Robust edge design ensures resistance to breakage due to misuse, catch points, and incorrect orientation**
- **Load-Sharing edge design improves load sharing across links, reducing stress in critical areas**

Design Features

- **Fault-tolerant edge design**
- **Patented Load-Sharing edge design**
- **Direct retrofit with legacy S2400—no need to change sprockets, designs, or drawings**
- **Each module has a directional arrow design cue**
- **Smaller belt edge opening area and sculpted module features increase safety and reduce catch points**
- **Available belt style:**
 - Flush Grid
- **Available material:**
 - PK (Polyketone)

** We release new belt styles and materials when available. Contact Customer Service for a list of the most up-to-date design features.*
