

PPG Global Community Engagement in 2020

When confronted by extraordinary challenges facing our communities, PPG and the PPG Foundation met the significant events of 2020 with meaningful commitments. By **engaging our employees** in community service, **helping students** navigate new learning environments, **transforming communities** with bright colors and addressing the evolving, essential needs of our neighbors, we aim to create life-changing differences, where and when it matters most.

WE BELIEVE IN

Engaging Our Employees

From sharing science know-how, to hosting virtual career panels and painting classrooms, our colleagues play an active role in building better communities. We are #PPGProud of the way they **VOLUNTEER** their time and talent as well as make donations to important causes.

Transforming Communities

Whether it's **BRIGHTENING NEIGHBORHOODS** through our global COLORFUL COMMUNITIES® program, teaming up with organizations to help those facing hardships caused by the pandemic, or supporting partners addressing racial injustices, we always aim to create happier, healthier communities.

Educating Future Innovators

In the spirit of PPG scientists, engineers, lab technicians and coatings specialists who shape the world around them with innovations and inventions, we encourage students to **DISCOVER** the joy of experimentation as well. We support educators shifting to virtual learning programs and partner with organizations creating STEM learning opportunities that link to real-life solutions and career possibilities.

▲ In Spain, our employees introduced a generation of girls to the possibilities of STEM – virtually! Through our ongoing support of the STEM Talent Girl program which is managed by ASTI Foundation, PPG volunteers participated in a series of virtual roundtable discussions that highlighted the critical role that female STEM professionals play in Spain's economy.

▲ At the Zhangjiagang White Cloud Primary School in China, our employees encouraged students to unlock their potential through a *Colorful Communities* project. Fresh, vibrant colors restored classrooms, a dance studio and other spaces for more than 1,200 local students.

▲ Real-world scientific discovery comes to life in the PPG Labs at the Great Lakes Science Center in Cleveland, Ohio. A venue for hands-on, interactive exploration, the labs are now home to chemistry-based summer camps, school field trips and more to help students develop an interest in science and open new horizons for STEM-related career fields.

PPG Global Community Engagement in 2020

Brightening schools and communities, sparking passion for science, supporting our most vulnerable neighbors. At PPG, we are committed to the communities that our 47,000 employees across 70 countries call home. As the world faced the COVID-19 pandemic, societal and racial injustices and other challenges in 2020, we recognized the relevancy and opportunity to bring to life our purpose and promise: WE PROTECT AND BEAUTIFY THE WORLD™.
