

Expanding your capability in electrocoat

PPG POWERCRON® 10X™ high-edge cationic epoxy elctrocoat

Powercron® 10X™ electrocoat is PPG's 10th generation, high-performance cationic epoxy primer. This electrocoat performs across an expanded cure window, enabling faster cure of higher mass assemblies to meet new and existing market needs.

The PPG Benefit

Global availability with production in each region

High-edge coverage on complex and sharp parts by rheology control

Expanded baking conditions at 150 °C (302°F) for 15 - 20 minutes may provide energy savings, increase productivity and reduce carbon footprint

High throwpower e-coat with broad film build capability (12-40 µm)

Major OEM approvals simplify specification process and broaden potential customer base

Specifically formulated without tin catalyst; REACH-compliant; HAPS-free; low solvent content

Suggested Markets

Automotive parts

Frames and truck beds

Electrification

Heavy duty equipment

Agriculture

Expanded Bake Window*

*Important Notice:

This cure chart represents general guidelines for electrocoat cures. This guidance does not release you from your own obligation to test our produts for their suitability for your intended purposes and applications. May help to reduce energy usage, increase productivity and shrink carbon footprint.

Please reach out to your PPG representative for more information.

Corrosion Test

Coated test panels (zinc phosphated) are placed in the salt spray cabinet for 1500 hours

Conventional Ecoat CRS - 15' @ 175°C (347°F)

PPG POWERCRON® 10X™ CRS - 15' @ 150°C (302°F)
