

What Every School Board Needs to Know About AI

School board members should be aware of the following aspects regarding ChatGPT:

1. **ChatGPT is an AI language model:** ChatGPT is an artificial intelligence (AI) language model developed by OpenAI. It uses a deep learning architecture to generate human-like responses based on the input it receives.
2. **Training data and limitations:** ChatGPT has been trained on a vast amount of text data from the internet, including books, articles, and websites. However, it's important to note that it does not possess real-time information or direct access to specific databases. Its responses are based on patterns and knowledge it has learned from the training data.
3. **Data privacy and security:** When interacting with ChatGPT, it is important to be mindful of the information shared. Avoid sharing any personally identifiable or sensitive information through the system to protect privacy and security.
4. **Impersonal and unbiased nature:** ChatGPT does not have personal opinions, beliefs, or emotions. It generates responses based on statistical patterns in the training data. It aims to provide helpful information but may not always understand the context or intent of a question.
5. **Potential for biased or inappropriate responses:** While efforts have been made to reduce biased or inappropriate outputs, ChatGPT may occasionally generate responses that are biased, offensive, or factually incorrect. OpenAI has implemented measures to mitigate these issues, but monitoring and providing feedback on problematic outputs is essential for ongoing improvement.
6. **Not a substitute for human judgment:** While ChatGPT can provide information and assistance, it should not replace critical thinking, human judgment, or professional expertise. School board members should exercise caution and rely on their knowledge and expertise when making decisions.
7. **Limitations in legal and regulatory advice:** ChatGPT should not be used as a source of legal or regulatory advice. Its responses are based on general information and should not be considered legally binding or authoritative. Consultation with legal experts is advised when dealing with specific legal matters.
8. **Need for critical evaluation:** It is essential to critically evaluate the responses generated by ChatGPT and cross-reference the information provided with reliable and authoritative sources. School board members should not solely rely on ChatGPT for making important decisions or policies and should seek human expertise and diverse viewpoints.
9. **Ethical considerations:** The use of AI language models like ChatGPT raises ethical considerations. It is important to consider the potential impact of relying on AI systems without proper oversight, including issues related to privacy, security, and accountability.

Ultimately, school board members should approach ChatGPT as a powerful tool that can provide insights and information but should exercise critical thinking, human judgment, and consult with experts when making important decisions. Overall, school board members should approach ChatGPT as a tool to support decision-making and information gathering, while being mindful of its limitations and potential risks.
