Introduction

The ARRT offers two eligibility pathways for certification and registration: primary and postprimary. This report summarizes the results of exams taken through the postprimary eligibility pathway from July 2020 through June 2021 including Mammography,Computed Tomography, Magnetic Resonance Imaging, Cardiac-Interventional Radiography, Vascular-Interventional Radiography, Sonography, Vascular Sonography, Bone Densitometry, and Breast Sonography. This report uses an annual cycle from July to June that aligns with updates to the content specifications and clinical experience requirements for the majority of these exams. During the reported cycle, both the Sonography and Magnetic Resonance Imaging exams could be taken through either the primary or postprimary eligibility pathway. Only results for those taking the exams through the postprimary eligibility pathway are presented here.

This report summarizes the results for each examination separately. Each section presents a brief content outline for the exam and the number of items in each category. Specific results for July 2020 through June 2021 are presented including mean scaled section scores, mean total scaled scores, and pass rates. Charts with historical pass rates and candidate volumes for each exam are also presented.

Interpretation of Scores

Total Scaled Score: The ARRT uses scaled scores to report exam results. Total scaled scores can range from 1 to 99.

Scaled scores are desirable because they account for any differences in difficulty between two or more versions of an exam. The use of scaled scores adjusts for differences in exam difficulty such that a given scaled score corresponds to the same level of performance regardless of exam form and permits comparison of exam results over time. Using scaled scores also ensures that those taking different forms are not penalized for taking a slightly more difficult exam.

Scaled scores are sometimes mistaken for percent correct scores. This confusion likely arises because ARRT scaled scores and percentages share a similar range of values. However, a scaled score of 75 does not mean that a candidate correctly answered 75% of the test items.

Section Scores: Scaled scores are used to report performance on each section of the exam. The primary purpose of the section scores is to provide general information to candidates regarding their strengths and weaknesses in particular content categories. Section scores can range from 0.1 to 9.9 and are reported in one-tenth point intervals (e.g., 8.1, 8.6). Section scores are intentionally placed on a narrower scale because they are often based on a small number of test items. Therefore, section scores are not as reliable as the total scaled score and should be interpreted with some caution.

Passing Score: A total scaled score of 75 is required to pass all ARRT exams. This pass-fail point, called the "cut score," is established by ARRT's Board of Trustees through a process called standard setting. During the standard setting process, the Board receives input from a panel representing a broad constituency of radiologic technologists. The cut score represents the performance standard required to obtain certification and registration; those who meet or exceed
the standard pass the exam. Beginning in 2013, the Sonography exam also requires a section scaled score of 7.5 or greater in both the Abdomen and OB/GYN sections.

Readers interested in more detailed reporting, such as an explanation of ARRT’s scaling procedures, or past years’ reports are encouraged to visit the exam statistics page on the ARRT website.

Updates

As of January 1, 2020, ARRT no longer offers a postprimary eligibility pathway for Sonography. The scores reported here represent a small number of candidates who were still eligible to take the Sonography exam through the postprimary pathway. For more information, follow this link to the ARRT news article.

In 2021, ARRT introduced a primary eligibility pathway for students who want to earn ARRT certification and registration in Vascular Sonography. For more information, follow this link to the ARRT news article. New content specifications went into effect on May 26, 2021, in conjunction with the first opportunity to take the exam through the primary eligibility pathway. The scores for Vascular Sonography reported here include only those candidates who took the exam through the postprimary pathway and have been split into two tables representing each set of content specifications active during this report’s cycle.

New content specifications for Mammography went into effect on July 1, 2020. For more information, follow this link to the ARRT news article.
## Summary Statistics
