

# Sonography

The purpose of the sonography examination is to assess the knowledge and cognitive skills underlying the intelligent performance of the tasks typically required of sonographers at entry into the profession. The tasks typically performed were determined by administering a comprehensive practice analysis survey to a nationwide sample of sonographers<sup>1</sup>. The *Task Inventory for Sonography* may be found on the ARRT's website ([www.arrt.org](http://www.arrt.org)).

The *Examination Content Specifications for Sonography* identifies the knowledge areas underlying performance of the tasks on the *Task Inventory for Sonography*. Every content category can be linked to one or more activities on the task inventory.

The table below presents the major content categories and subcategories covered on the examination. The number of test questions in each category are listed in bold and number of test questions in each subcategory in parentheses. Specific topics within each category are addressed in the content outline, which makes up the remaining pages of this document.
