

Flexcon application configuration & guidelines for exterior mounting of one-way window graphics

Flexcon® SeeThru-Sign® STSWBF7030 (Base film for windows)

Configuration of finished graphic

Lines 3 & 4 denote SeeThru-Sign® base film construction.

For application in the field, the release liner backing is removed, exposing the pressure-sensitive adhesive for installation. Please refer to "Flexcon's Window Application Installation Guide" for more information.

* Using an optional overlamine can prevent rain and dust from being trapped in the perforations. Overlaminating the signage will help to maintain performance and visibility through the end of the promotion.

Note: STSWBF7030 is not intended for vehicle window advertising.

Contact your sales representative for more information.
