Specification document
Last updated: 5th June 2019

The specification document for the insendi platform is as follows:

Programme and course development

The programme and course development functionality will enable the Licensee to:

- Create areas within the Licensee's instance of the platform at the 'programme of study' level.
- Create areas within the 'programme of study' level for individual courses.
- Create materials within the course area comprising a series of weeks, screens and activities.

Course delivery

The platform will enable the Licensee to deliver courses to students. This will include:

- Administration
  - The ability to add/remove students/staff to programme and course areas
  - The ability to create and modify groups of students
  - The ability to post messages to students via the newsfeed areas
  - The ability to upload files to the platform for access by students
  - The creation of a programme support page for the provision of administrative information
  - The creation of a class list

- Teaching
  - The ability for students to access and interact with materials created via the Course Development Toolkit
  - The ability for teaching staff and administrators view and monitor the progress of students through the course materials
  - The ability to post messages to students via the newsfeed areas

- Assessment
  - The ability to grade activities in the platform
