Introduction

The Keysight Technologies, Inc. U2941A parametric test fixture is designed to complement usage of the Keysight U2722A USB modular source measure unit in the testing of semiconductor components, including SMT and DIP ICs.

The bundled Keysight Parametric Measurement Manager software also supports the Keysight U2751A USB modular switch matrix when used with the U2722A.

Features

– Closed lid minimizes ESD on sensitive circuits and components

– Up to 3 source/measure channels supported

– Different socket modules to match a wide variety of pin configurations

– Assembly PTFE plate for low-current measurements

– Bundled Keysight Parametric Measurement Manager software eases set-up, testing and data recording

Features of the Keysight Parametric Measurement Manager Software

The Keysight Parametric Measurement Manager software comes bundled with the U2941A parametric test fixture. The software helps kick start tasks sooner with the below features:

– Out-of-box configuration of instruments for easy set-up

– User-friendly graphical user interface

– IV curve plotting with various graph tools, including autoscale, zoom and markers

– Saving of IV curve data to text file format

– Saving of IV curve graph to JPEG file format

– Print graph function

Displays Main and Application test set-ups of the U2722A

Displays IV curve plot

Provides relay switching functions for single or multiple channels of the U2751A

Enables quick set-up of specific application tests (diode forward/ reverse IV tests and resistance measurement) from the library
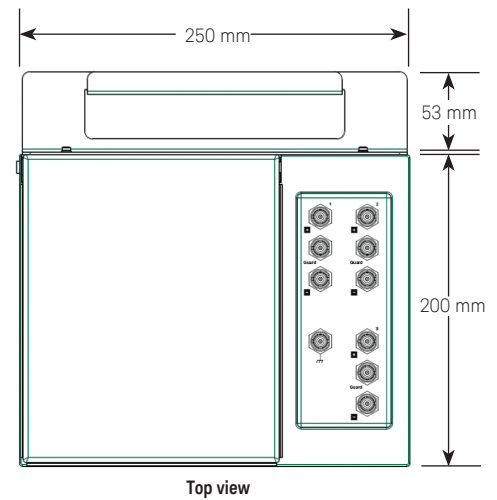

Saves IV curve plot image and data to JPEG and TXT files, respectively
