Definitions

All specifications apply over a 23 °C ± 5 °C range (unless otherwise stated) and 30 minutes after the instrument has been turned on.

All specified and supplemental values for RF input signals are applicable to sinusoidal-wave carriers unless otherwise noted.

Specification (spec.)

Warranted performance. Specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Following supplemental information is intended to provide information that is helpful for using the instrument.

Typical (typ.)

Describes performance that will be met by a minimum of 80% of all products.

Supplemental performance data (SPD)

Represents the value of a parameter that is most likely to occur; the expected mean or average.

General characteristics or nominal (nom.)

A general, descriptive term that does not imply a level of performance.

RF Input Port

Table 1-1. RF IN port

Description	Specification
RF IN connector	Type-N (female), 50 Ω nominal
RF IN frequency range	10 MHz to 7 GHz
RF IN measurement level	-20 dBm to +20 dBm (> 30 MHz) -15 dBm to +20 dBm (< 30 MHz)
Input attenuator	0 to 35 dB (in 5 dB step)
Input damage level	AC > +23 dBm, DC > 5V
Input VSWR @50 Ω	
10 MHz to 30 MHz	< 1.6
30 MHz to 2 GHz	< 1.2
2 GHz to 3 GHz	< 1.3
3 GHz to 4 GHz	< 1.3 typical
4 GHz to 7 GHz	< 1.5 typical

Phase Noise Measurement

Table 1-2. Phase noise measurement performance

Description	Specification (E5052B)	Specification (E5052B Option 011)
RF IN frequency range	10 MHz to 7 GHz	
Measurement frequency bands	10 MHz to 41 MHz, 39 MHz to 101 MHz, 99 MHz to 1.5 GHz, 250 MHz to 7 GHz ¹	
RF frequency tracking range	0.4% of carrier frequency	
Measurement parameters	SSB phase noise [dBc/Hz], Spurious noise [dBc], Integrated rms phase deviation [deg, rad] or time jitter [s], Residual FM [Hz rms]	
Number of trace	1 data trace and 1 memory trace with 'data math' functions	
Measurement trigger	continuous/single/hold source: internal/external/manual/bus	
Offset frequency range (effective)		
RF carrier signal > 1 GHz (> 400 MHz for wide capture mode)	1 Hz to 100 MHz 1 Hz to 40 MHz (wide capture mode)	10 Hz to 100 MHz 10 Hz to 40 MHz (wide capture mode)
RF carrier signal < 1 GHz (< 400 MHz for wide capture mode)	1 Hz to 10% of carrier frequency	10 Hz to 10% of carrier frequency
Phase noise uncertainty² at effective offset frequencies		
Offset 1 Hz to 10 Hz	± 4 dB (SPD)	N/A
Offset 10 Hz to 100 Hz	± 4 dB (SPD)	
Offset 100 Hz to 1 kHz	± 3 dB	
Offset 1 kHz to 40 MHz	± 2 dB (± 3 dB for wide capture range mode)	
Offset 40 MHz to 100 MHz	± 3 dB	
SSB phase noise sensitivity	See Table 1-3, 1-4, 1-5, Figure 1-1, 1-2, 1-3	
IF gain setting	0 dB to 50 dB in 10 dB step (not available in wide capture mode)	0 dB to 30 dB in 10 dB step (not available in wide capture mode)
Enhanced sensitivity	Cross-correlation method available. Number of correlation = 1 to 10,000 See Table 1-5 and Figure 1-3	N/A
Built-in LO phase noise optimization	< 150 kHz (optimized for better close-in phase noise measurement) > 150 kHz (optimized for better far-out phase noise measurement) See Figure 1-4.	
Reference oscillator bandwidth optimization	Narrow / Wide See Figure 1-5.	
Residual spurious response level	< -80 dBc (SPD) at > 10 kHz offset frequency with correlation > 120 sec. except for 23.5 MHz ± 1 MHz and 71 MHz ± 3 MHz of carrier frequency < -65 dBc (typical) at 1 kHz to 10 kHz offset frequency	
Measurement time	See Table 1-6	
Measurement range	Capture mode: Normal or Wide	

Description	Specification (E5052B)	Specification (E5052B Option 011)
PN mode (Regular)	RBW: Auto X-axis: Offset frequency in log scale	
Segment PN mode ³	RBW: 96 mHz to 25 kHz (stepped), Maximum offset frequency span: 93.2 Hz to 24.4 MHz (stepped) X-axis: Offset frequency in liner scale	N/A

1. Wide capture mode is available for 250 MHz to 7 GHz only

2. Phase noise uncertainty: specified at 10 MHz and 1 GHz of carrier frequency with 0 dBm level. PN level > -60 dBc

3. Segment PN mode is available with the firmware revision 3.20 or later. In this datasheet, specification of phase noise sensitivity, residual spurious response level and measurement time are applicable to the regular PN mode. In the segment PN mode, number of these parameters depend on the measurement setting. For more detail, refer to the user's manual.

Display Functions

Table 9-1. Display functions (windows and traces)

Description	General characteristics
Measurement windows	Up to 6 windows, and 1 user definable window
User definable window	8 data traces and 8 memory traces
Trace functions	
Data traces	Display current measurement data and/or memory data
Trace math	Addition, subtraction, multiplication, or division of trace data
Title	Add customized title to each measurement window Titles are printed on hard copies of displayed measurements.
Auto scale	Automatically selects scale resolution and reference value to vertically center the trace.
Statistics	Calculates and displays mean, standard deviation, and peak-to-peak deviation of the trace.
Marker functions	
Data markers	10 independent markers per trace. Reference marker available for "delta marker" operation.
Marker search	Maximum value, minimum value, peak, peak-left, peak-right, target, target-left, target-right, multi-peak, and band markers with user-definable bandwidth value.
Marker-to	Set, start, stop, center to active marker stimulus value. Set reference to active marker response value.
Searching range	User definable
Tracking	Performs marker search continuously or on-demand.

Data Processing Capabilities

Table 9-2. Data processing capabilities

Description	General characteristics
Graphical user interface	The analyzer employs a graphical user interface based on Windows® OS. There are three ways to operate the instrument manually; you can use a hard key interface, a touch-screen interface, or a mouse interface.
Limit-line test	Define the test limit that appears on the display for pass/fail testing. Defined limits may be any combination of horizontal or sloping lines and discrete data points.
Data storage	
Internal removable SSD	Store and recall instrument states and trace data on internal removable solid state drive. Instrument states include all control settings and memory trace data.
File sharing	Files on user disk drive (F:) can be accessed from an external Windows PC through LAN or USB (USB-TMC)
Screen hard copy	Print-outs of instrument data are directly produced on a printer via USB.
Automation	
Built-in VBA®	Applications can be developed in a built-in VBA (Visual Basic for Applications) language.
Controlling via GPIB or USB	The GPIB interface operates with IEEE488.2 and SCPI protocols. The instrument can be controlled by a GPIB external controller. The instrument can control external devices using a USB/GPIB interface.
Controlling via USBTMC	The USB interface operates with USBTMC and SCPI protocols. The instrument can be controlled by an external PC using the USB interface with a USB cable.
LAN	(10/100 base-T) Telnet, SICL-LAN

Optional Application Software

About “mmW application”:

Phase noise measurements above 26.5 GHz can be done by using external harmonic mixers (such as Keysight 11970 Series) and a power divider (splitter) with E5053A LO and IF terminals. The E5052B’s mmW application software sets up appropriate LO frequencies for the harmonic mixers.
