An Electro Rent Case Study

The Problem

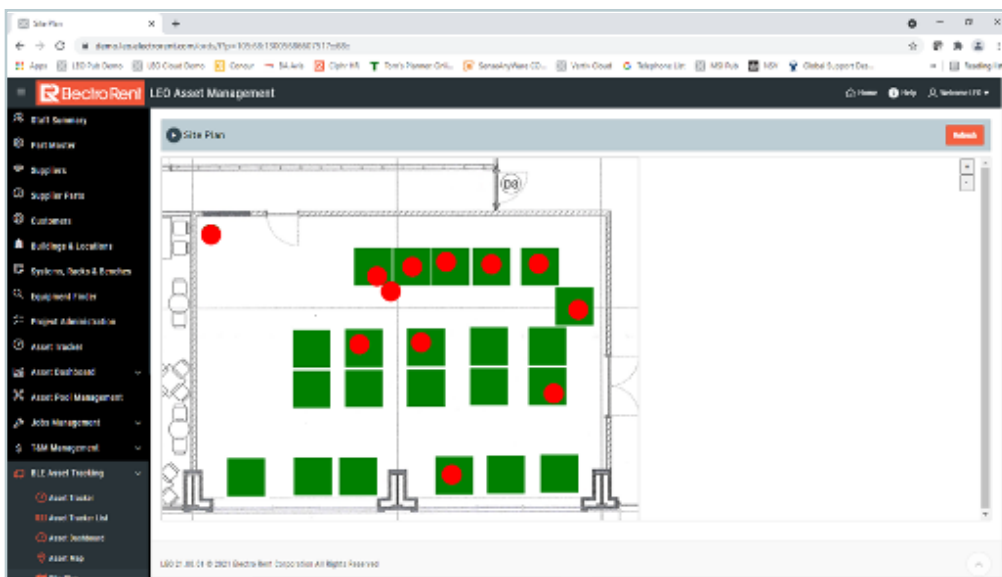

Finding valuable test and measurement (T&M) assets is challenging, even when the equipment resides within your own four walls. With multiple labs, large labs, or with assets that are portable, the challenge becomes even greater.

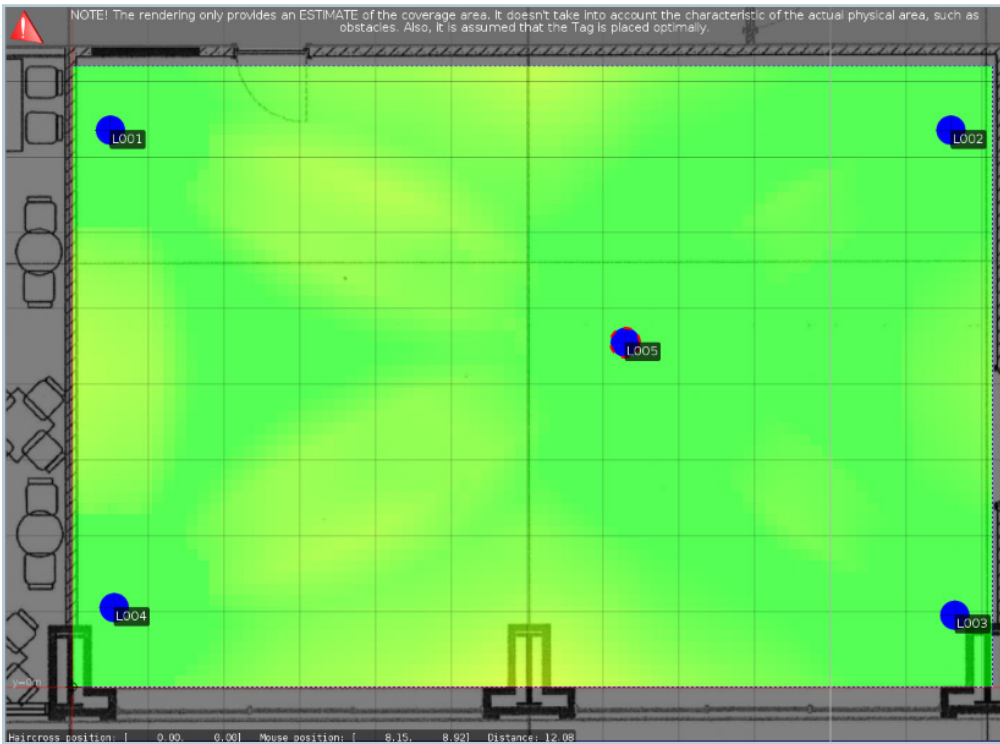

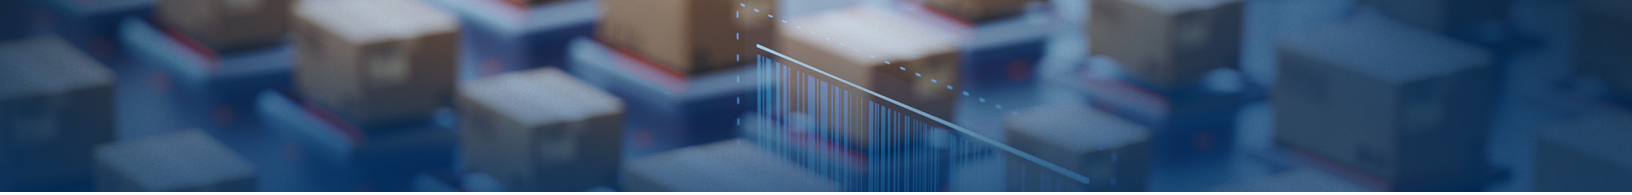

In many organizations, it can take hours of an engineer's time to locate a specific asset. In fact, entire days can be lost if an audit is required to index all T&M assets.

Using location tracking to monitor expensive test assets has many benefits:

- Saves valuable time and eliminates the need for hours or days of searching.
- Eliminates the need for routine equipment audits.
- Can generate capital by identifying unused or rarely used items for sale.

Fully 90% of test assets were tracked and located with an accuracy of one-to-two test racks as an added benefit, our customer is able to identify unused assets for disposal

Our Solution

Our asset tracking solution, featuring a patented angle of attack and signal strength method, uses BLE technology to locate and track your test assets in any lab, anywhere.

Proven Results

Recently, Electro Rent conducted an asset tracking engagement at one of the world's largest semiconductor manufacturers.

At the end of the implementation, fully 90% of assets were tracked and located with an accuracy of one-to-two test racks, reducing search time from hours to minutes and saving time and money in the process.

Our experts can help you locate, track, and manage your test equipment. Reach us by phone at **1.800.553.2255** or email **AOSolutions1@electrorent.com** and start saving now.
